

It's best to avoid changing the original files to make future upgrades easy.

Customize smarty templates, css styles and icons

Please see: [Customizing Themes](#), [edit templates](#) and [edit css](#)

Customize JavaScript

Add your custom JavaScript to

```
styles/stylename/custom.js
```

or

```
styles/stylename/options/optionname/custom.js
```

Customize language files

Add your custom language strings to:

```
lang/**/custom.php
```

where ** is the language code.

More info: [i18n](#)

Customize profiles

Please see <http://profiles.tiki.org>

Customize the code overall (new features, etc.)
