

# Domain redirects

This feature has been added to [Tiki6](#)

When the site is accessed through specific domain names, redirect to an alternate domain preserving the URL. Useful for domain name transitions, like tikiwiki.org to tiki.org.

In tiki-admin.php, search for "Domain redirects"

The redirect is for domain only and should be put in this format:

```
"www.domain1.com,www.domain2.com"
```

Note: One entry per line. Comma separated list: old, new

As explained at <http://dev.tiki.org/wish3164>
