

This produces a list of all [dynamic variables](#) in your Tiki instance.

## Parameters

Show dynamic variables and their values.

*Introduced in Tiki 15.*

[Go to the source code](#)

*Preferences required:* `wikiplugin_dynamicvariables`

Parameters	Accepted Values	Description	Default	Since
<code>linesep</code>	<code>xss</code>	String to use between elements of the list if table layout is not used	<code>,</code>	15.0
<code>layout</code>	<code>(blank)</code> <code>table</code>	Set to <code>table</code> to show results in a table (not shown in a table by default)		15.0

## Example

*This code,*

```
{dynamicvariables layout="table"}
```

Would produce a list of dynamic variables in a table. We can't do it here on [doc.tiki.org](#) because one of the dynamic variables causes a weird redirect. Here is the [Dynamic Variable causing trouble](#) on [PluginDynamicVariablesTest](#).
