Parameters

Include a Smarty template (.tpl) file in a page

Introduced in [Tiki 15](#).

[Go to the source code](#)

Parameters	Accepted Values	Description	Default	Since
filename	text	If you need to include Smarty template files.		15.0
values	text	Values to be passed to tpl file, for example <code>values=var1:val1&var2:val2</code> , which can then be accessed in the Smarty template file as <code>{\$values.var1}</code> and <code>{\$values.var2}</code>		15.0

Examples

Example 1

This code:

```
{includetpl filename="credits.tpl" values="var1:foo&var2:wohoo"}
```

Would produce on this site:

Theme: Fivealive-lite/Kiwi

If you use in your tpl the variables `var1` and `var2` (as in this example), they would get their values set in the corresponding plugin parameters above (`foo` and `wohoo`, correspondingly).

To use those values in a template you would use `{$values.var1}` and `{$values.var2}` in your Smarty code.

Example 2 with a Wiki Page Template

You can also use a Smarty template in a wiki page like this:

```
{includetpl filename="tplwiki:Tpl Page Name" values="var1:foo&var2:wohoo"}
```

Make sure you give your page `tiki_p_use_as_template` permissions and make it only editable by trusted users.
