Report it in wiki links	Add the date parameter to wiki links.	Disabled
User's information page	A personal wiki page for each user.	Disabled
Userpage prefix	All userpages share a common prefix. The page name will be a concatenation of the prefix and the username. A prefix is required.	User:

Option	Description	Default
Users can lock pages	Enable users to lock pages and so prevent others from editing them	Disabled
View source	Users (with permission) can see the wiki and/or HTML syntax of the page.	Enabled
Wiki copyright	Apply copyright management preferences to this feature.	Disabled
Wiki page pagination	Enable the separation of a wiki page's content into a set of two or more paginated pages.	Disabled
Wiki page separator	The separator to use in wiki page content to mark the end of each page section	...page...
Wiki references	Permits using references and the reference library.	Disabled
Library references	Enforce library reference as master	Disabled
Display reference in a popover	Display the details of the reference in a popover	Disabled
Reference style	Default style when using references AMA citation style (default) | MLA citation style	AMA citation style (default)
Simple wiki ratings	Enable users to rate wiki pages based on a simple numeric scale.	Disabled
Wiki rating options	List of options available for the rating of wiki pages	0,1,2,3,4,5
Redirect to similar wiki page	If a requested page doesn't exist, redirect to a similarly named page	Disabled
Redirect pages using these prefix-alias semantic links	Comma-separated list of page name prefixes for pages that will be redirected to other pages with a semantic link	None
Semantic links	Going beyond Backlinks functionality, this allows some semantic relationships to be defined between wiki pages.	Disabled
Similar pages	Display a list of pages named similarly to the current page.	Disabled
Similar pages only listed in same language	When listing similar pages, such as on a "page not found" page, only display pages in the same language as the request page.	Disabled
Redirect to page alias, if any	If a requested page doesn't exist, redirect to an alias page, if specified using an alias semantic link	Enabled
Semantic link types to use as page alias markers	Comma-separated list of semantic links to identify a page as an alias of another	Alias
URL Suffix Cleaner	When the requested page does not exist, tests removing 1 or 2 of the last characters from the URL to see if it gets an existing page.	Disabled
WikiWords	Automatically convert "CamelCase" words into wiki links.	Disabled
Accept dashes and underscores in WikiWords		Enabled

Option	Description	Default
Link plural WikiWords to their singular forms		Enabled
Attachments	Allow users to upload (attach) files to a page.	Disabled
Display by default		Disabled
Use file galleries for wiki attachments	Wiki attachments will be stored in the file gallery. This is the preferred way to store attachments starting Tiki 26+.	Enabled
Storage	☰ Store in database | Store in directory	Store in database
Path (if stored in directory)		None
Images	Allow users to upload images to a page.	Enabled
Use file galleries to store images	If not enabled, images will be stored in the file system, in the /img/wiki_up directory, instead.	Enabled
Comments below wiki pages	Users with permission may post threaded comments. The comments will appear at the bottom of the page.	Disabled
Allow comments per wiki page	Enable control of comments on wiki pages on a per-page basis. ☰ Disable | Enable (default On) | Enable (default Off)	Disable
Display comment list by default		Disabled
Display order	☰ Newest first | Oldest first | Points	Points
Display Post new comment form by default		Disabled
Enable watches on comments		Enabled
Number per page		10 comments
Structures	Structures allow grouping any number of wiki pages in a hierarchy, with a common navigation bar and the option to print them all together as a single HTML document.	Disabled
Structure navigation bar location	Display Next and Back buttons, breadcrumbs, and a form to add a new page. ☰ Top | Bottom | Both | Neither	Top
Open page as structure	Open a page within its structure (with structure navigation, etc.), even if no structure parameter is given in the URL	Disabled
Make structure from page	Show a button below each wiki page to allow converting it from a simple wiki page into the root page of a new structure	Disabled
Categorize structure pages together	Place new pages of a structure in the same category as the structure's root page	Disabled
Structures drill down menu	Ajax-style menu in which the user moves through the page hierarchy by clicking to reveal the next level down	Disabled

Option	Description	Default
Lock Wiki Structures	Enable users to lock wiki structures and so prevent others from editing them	Disabled
Create webhelp from structure	If enabled, the Structure Admin page will include a new option for generating WebHelp (a self-contained, HTML “help” version of the wikii structure). Use this option to distribute wiki pages to offline users in a usable format.	Disabled
Pages can reoccur in structure	A page can be listed multiple times in a structure	Disabled
Pages not in structure	Users (with permission) can see the sortable, searchable list of wiki pages (tiki-listpages.php). Use the Configuration area to specify which items to display.	Disabled
Disable inherited direct object permissions	Normally pages will inherit object permissions from their parent page. However, object permissions override category permissions. So, if you are relying on category permissions in structures, you may want to consider this setting, in order to disable inheritance of direct object permissions when adding pages from a structure	Disabled
Plugin Table of Contents (Structure)	Display a table of contents of pages in a structure	Enabled
Create watch for author on page creation		Disabled
Enable watch events when you are the editor		Disabled
Watch minor edits		Disabled
Namespace	Enable namespaces feature for wiki pages.	Disabled
Namespace separator	Select the character, symbol, or text to use as the namespace separator.	__
Hide namespace indicator in structure path	Hide namespace indicator in structure path.	Disabled
Hide namespace indicator in page title	Hide namespace indicator in page title.	Disabled
Center text using ::: instead of ::	*Useful to avoid conflicts with C++ scope operators or default namespace separator*	Disabled
Page name display stripper	The character(s) to use as a delimiter in the page name. The portion of the name after the character(s) will not be displayed. If the page name display stripper conflicts with the namespace separator, the namespace is used and the page name display is not stripped.	None
Force all non-namespace page links to the same namespace	If the current page is in a namespace, all links without a namespace will have it added automatically	Disabled
