```
[global] preference.feature_wysiwyg = "n" preference.feature_sefurl = "y" preference.helpurl = "http://support.example.com/" ; ... more settings ...
[basic : global] preference.feature_wiki = "y" preference.feature_forums = "n" preference.feature_trackers = "n" ; ... more settings ... [pro : global]
preference.feature_wiki = "y" ; BBB configured, but user can still toggle on/off preference.bigbluebutton_server_location = "bbb.example.com"
preference.bigbluebutton_server_salt = "1234abcd1234abcd" ; ... more settings ... [client1.example.com : pro] preference.browsertitle = "Client #1
Intranet" preference.sender_email = client1@example.com
```

the example above, the following preferences would be set for using the identifier *client1.example.com*:

- feature_wysiwyg = n
- feature_sefurl = y
- helpurl = http://support.example.com/

- feature_wiki = y
- bigbluebutton_server_location = bbb.example.com
- bigbluebutton_server_salt = 1234abcd1234abcd
- browsertitle = Client #1 Intranet
- sender_email = client1 at example.com

Disable classes ofÂ preferences

references can be disabled by setting a value to each of them individually. However, this process may be long and will require maintenance with the volutions of Tiki.

ki allows to set multiple rule priorities, each verification priority can allow or deny a preference. Rules can be specified at various levels, just like the reference overrides above.

Various rules

[global] rules.0 = deny experimental new [pro : global] rules.5 = allow new rules.10 = allow feature_wysiwyg
