The screenshot shows a web-based administration interface for managing hotwords. At the top, there's a header titled "Admin Hotwords". Below it, a section for "ADD HOTWORD" contains input fields for "Word" (with "php" typed in) and "URL" (with "www.php.net" typed in), followed by a "Add" button. Below this, a table titled "HOTWORDS" lists existing entries: "tiki" and "google". Each entry has a "Word" column, a "URL" column, and an "Action" column containing a red "X" icon. Above the table is a search bar with a "Find" button.

Word	URL	Action
tiki	www.tikiwiki.org	X
google	www.google.ca	X
