

# Console

Tiki Console is to administer your Tiki instance via the command line. It is based on Symfony's Console Component.

You can also use via instance:console in Tiki Manager

*Please note that the following information is given for Tiki LTS versions, more commands exists and this list will be updated as the next LTS is released. Source code for next version of Tiki is here:*

*<https://gitlab.com/tikiwiki/tiki/-/tree/master/lib/core/Tiki/Command>*

**Type this command in the base directory of your Tiki instance to discover all the commands for your version.**

```
php console.php
```

If you want to learn the inner workings, source code is here:

<https://gitlab.com/tikiwiki/tiki/-/tree/24.x/lib/core/Tiki/Command>

```
user@server:/www/tiki$ php console.php Tiki Console Tool Usage: command options arguments Options: -h, --help
Display this help message -q, --quiet Do not output any message -V, --version Display this application version --ansi

#### Note:

In case you want to use OCR(Optical Character Recognition) command, you should activate it on your preferences then, install `thiagoalessio/tesseract\_ocr` and `media-alchemist/media-alchemist` packages otherwise it will show

`unavailable` on CLI for each command description;  
And vcs(Version Control Software) command is a support for svn subversion.

Use with care! tracker:import Import a CSV file into a tracker using a tracker tabular format users users:list Display the list of users in the system users:password Set the password to a given user

# Examples

Below are some common examples of how to use the console. They are typically for a recent version (so if they don't work, it could be that your Tiki is too old)

# Help on database update

---

```
php console.php database:update --help
```

# To mark an upgrade error as registered (so it will be ignored)

---

```
php console.php database:update --auto-register
```

*This is useful if you get database errors such as "Duplicate entry..." sometimes*

# Help on databaseÂ install

---

```
php console.php database:install --help
```

# Translations

translation:englishupdate Fix English strings after modifying them. translation:export Update language.php translations from the database translation:getstrings Update language.php files with new strings translation:percentage Get the translation percentage for each language.php file

Translation Update Examples

For example if you fix a typo in a string which is already translated, e.g. you fix "Setttings" to "Settings":

## Fixing a typo in the original English string for all languages

```
php console.php translation:englishupdate
```

It will update all languages without modifying the translated part (in case it was already translated), so e.g. in the French language.php it will fix this:

```
"Setttings" => "ParamÃtres",
```

To this:

```
"Settings" => "ParamÃtres",
```

Without the need to re-translate the string which had a typo in the English original again.

Parameters

You can use the following parameters with translation:getstrings

```
[-l|--lang [LANG]] [--outputfiles] [--exclude [EXCLUDE]] [--include [INCLUDE]] [--basedir [BASEDIR]] [--filename [FILENAME]]
```

## Getting string for a single language

php console.php translation:getstrings --lang=en

Note: The basedir parameter is working only if it point to this or another Tiki root directory (will search for /lang/...)

# Batch Upload

*A console command for Batch Upload so you can set a scheduled batch upload cron task*

## Example command line usage

```
# file according to sub-directory name and create missing galleries php console.php files:batchupload 1 --
  subdirToSubgal --createSubgals # file according using sub-directory with integer name into gallery with
corresponding ID php console.php files:batchupload 1 --subdirToSubgal --subdirIntegerToSubgalId # set file user etc
so apache can manage the files afterwards php console.php files:batchupload 1 --fileUser apache --fileGroup alluser
--fileMode 0775 # upload files from a different directory php console.php files:batchupload 1 --filesPath
/var/www/other/uploads # more help php console.php help files:batchupload
```

# Plugin List Execute

Actions can be run in conjunction with PluginListExecute:

```
php console.php list:execute "Page Name" "Action Name"
```

If you see this type of error message:

```
[root@server]# php console.php list:execute "Batch Sync Users" "SyncUsersTrackers" Command not available at this stage. Complete required installation steps. [root@server]#
```

You may need to update the database schema first, with the usual:

```
[root@server]# php console.php d:u
```

# Wiki PluginÂ Approval

---

plugin:approve plugin:list plugin:refresh

# Disable the Installer

Disable the installer:

---

```
php console.php installer:lock
```

# Manage files from file galleries

Copy files from a gallery to a regular directory on the filesystem:

```
php console.php files:copy 1 /tmp/dest/
```

Move files from a gallery to a regular directory on the filesystem:

```
php console.php files:move 1 /tmp/dest/ --confirm
```

# Clear Caches andÂ options

## All the cache

```
php console.php c:c
```

## All the cache

```
php console.php c:c all
```

## Help

```
php console.php c:c help
```

## Database cache

```
php console.php c:c private
```

## Modules cache

```
php console.php c:c modules
```

## Templates cache

```
php console.php c:c templates
```

## CSS and JS caches

```
php console.php c:c public
```

# Users commands

A few commands related to user management are available in the Tiki console.

---

users users:create Create a new user users:list Display the list of users in the system users:password Set the password to a given user users:unlock Unlock a user

---

×

 Note

If you get `Credentials file local.php not found`. See <http://doc.tiki.org/Installation> for more information. message it means you are doing fresh install from command line and need to create the `db/local.php` file manually first or run the Installer via a web browser.

---

# Getting advanced help

```
ssh-w00ec615@dd29038:/www/htdocs/w00ec615/11x$ php console.php help cache:clear
Usage:
  cache:clear [--all] [cache]

Arguments:
  cache                Type of cache to clear (public, private, templates, modules)

Options:
  --all                Clear all caches
  --help (-h)         Display this help message.
  --quiet (-q)        Do not output any message.
  --verbose (-v)      Increase verbosity of messages.
  --version (-V)      Display this application version.
  --ansi              Force ANSI output.
  --no-ansi           Disable ANSI output.
  --no-interaction (-n) Do not ask any interactive question.
  --site              Multi-Tiki instance

ssh-w00ec615@dd29038:/www/htdocs/w00ec615/11x$
```
