

Facebook Tab

Option	Description	Default
Facebook site name	The default website name that will be used by Facebook (og:site_name) for every webpage. This parameter will be used instead of the browser title.	None
Facebook site image	The default image (logo, picture, etc.) that will be used by Facebook (og:image) for every webpage. It must be specified as a URL. The minimum valid image size is 200x200px. However, Facebook recommends 1200x630px or larger for the best display on high resolution devices.	None
Application ID	Application ID generated by registering this Tiki site as an application at Facebook	None
Application secret	Application secret generated by registering this Tiki site as an application at Facebook	None
Login using Facebook	Allow users to log in using Facebook	Disabled
Auto-create Tiki user	Automatically create a Tiki user by the username of fb_xxxxxxx for users logging in using Facebook if they do not yet have a Tiki account. If not, they will be asked to link or register a Tiki account	Disabled
Require Facebook users to enter local account info on creation	Require Facebook users to enter local account info, specifically email and local log-in name	Disabled
Set user email from Facebook on creation.	Tiki will set the user's email from Facebook on creation.	Disabled
Create a user tracker item on registration	Sets whether a tracker item should be created for the user upon registration	Disabled
First and last name tracker field IDs to set on creation	Comma-separated, with first name field followed by last name field; for example, '2,3'	Disabled
Tiki can post to the Facebook wall	Tiki may post status messages, notes, photos, and videos to the Facebook Wall.	Disabled
Tiki can manage events	Tiki may create and RSVP to Facebook events.	Disabled
Tiki can manage pages	Tiki can manage user pages.	Disabled
Tiki can SMS	Tiki can use SMS functions via Facebook.	Disabled

Since Tiki 16 Tiki integrate default parameters that are used by Facebook when fetching a page if they are missing or you prefer to use your own for the entire Tiki.

Step 3

In this step, you don't to change anything since the **Post-Authorize Callback URL** field has been removed by Facebook.

The screenshot shows the Facebook Developer Console interface for the 'Facebook Integration' settings. On the left, a navigation menu includes 'About', 'Web Site', 'Facebook Integration' (highlighted), 'Mobile and Devices', 'Credits', and 'Advanced'. The main content area is organized into sections:

- Core Settings:** Application ID and Application Secret (both redacted with a black box). To the right, 'Your OAuth Client ID' and 'Your OAuth Client Secret' are also redacted.
- Canvas:** Contains several fields and options:
 - Canvas Page:** A text input field with the value 'http://apps.facebook.com/' followed by a small empty input box and a slash.
 - Canvas URL:** An empty text input field.
 - Secure Canvas URL:** An empty text input field.
 - Canvas Type:** Radio buttons for 'Iframe' (selected) and 'FBML'.
 - IFrame Size:** Radio buttons for 'Show scrollbars' (selected) and 'Auto-resize'.
 - Bookmark URL:** An empty text input field.
- Discovery:** A 'Social Discovery' option with 'Enabled' selected and 'Disabled' unselected.
- Page Tabs:** Fields for 'Tab Name', 'Tab URL' (pre-filled with 'http://apps.facebook.com/[CANVAS_URL]/'), and 'Edit URL'.

At the bottom center, there is a blue 'Save Changes' button. To the right of the Canvas and Discovery sections, there are explanatory text blocks: 'The base URL of your app on Facebook', 'Facebook pulls the content for your app's canvas pages from this base URL', 'Facebook uses this secure version of the Canvas URL when your app is accessed by a user over a secure connection (https)', 'Choose whether your Canvas URL renders HTML in an IFrame or returns FBML', 'Choose "Auto-resize" if you are using %<code>fb.Canvas.setAutoresize</code> in your IFrame app and want the Canvas IFrame to grow to the height of your app's content', 'The URL to load when a user clicks your app's bookmark. If blank, this defaults to your Canvas Page', 'If social discovery is enabled, Facebook may highlight a user's usage of your app in News Feed and other places to help the user's friends discover your app.', 'The title of your tab on a Page', 'Facebook pulls content for your tab from this URL, which must be relative to your Canvas Page', and 'URL at which Page administrators can edit app settings'.

Step 4

Here, you choose the way your application authorizes with Facebook. As it is set by default, just check that **HTML5/mobile web** for your **Application type** is selected.

Step 5

Start Using Facebook Credits, this financial/billing integration mostly not needed for Tikiwiki, leave it that way.

Start Using Facebook Credits

Welcome to the Facebook Credits program. To get started:

1. Register your company below
2. Provide core settings below
3. Review API documentation and complete your integration

Company Information

Company Name	<input type="text" value="No company registered"/>	Don't see your company listed? Register it now	<small>Before accepting Facebook Credits, we need to collect company information to pay you for Credits users spend in your application.</small>
--------------	--	--	--

Core Settings

Credits Callback URL	<input type="text"/>	Facebook pings this URL after a user initiates or updates an order.
Email	<input type="text"/>	This email is used for payments related communication.
Credits Test Users (optional)	<input type="text"/>	Users entered here (UIDs, comma-delimited) will be able to use your app and go through Facebook Credits flows but will not be charged.

[Save Changes](#)

Step 6

On this last step, you can give the Facebook **Deauthorize Callback** which will be called, when a user disallows your application on Facebook. Don't choose sandbox mode here.

Usually, your web server has a static IP address. By putting it on the **server whitelist**, you can add a bit of security, as only requests from that IP will be processed. If you run a server farm with multiple servers, add all IP addresses.

You can also uncheck all the "deprecated" setting, it won't hurt.

 Preload FQL Multiquery
 Early Flush

Now you created the application at Facebook and you can enter the data on your tiki server. Go to Admin->Social networks and enter the data from Facebook.

Facebook Settings

Note

To use Facebook integration, you must register this site as an application at <http://developers.facebook.com/setup/> and allow extended access for the application. Enter <your site URL>tiki-socialnetworks.php as connect URL.

API key:

Application secret:

Application ID:

User authorization

Users need the tiki_p_social_network permission in order to use social networks. To login via facebook, the Anonymous group will need this permission.

Before being able to use the Facebook integration, users must authorize the TikiWiki site by requesting an oauth token. This can be done via the **Social networks** tab on My Tiki.

Note : As i (Bernard) authorize it i encounter an error from Facebook servers: "message": "Invalid redirect_uri: Given URL is not allowed by the Application configuration.". I had to logout/login for Facebook to accept the authorization. It is possible also that you have to wait more than 15mn for the Facebook server to use the setting you just entered.
