

Gentoo Install

This is an installation guide.

Gentoo Portage provides both Tikiwiki 1.8 and 1.9 masked unstable

Note: The Gentoo Portage Managers have updated Tikiwiki packages:

- <http://packages.gentoo.org/ebuilds/?tikiwiki-1.8.6>
- <http://packages.gentoo.org/ebuilds/?tikiwiki-1.9.1>

For a list of pending bugs on gentoo bugzilla query:

- ALL Tikiwiki

How to choose your version

TikiWiki 1.7.x is not secure and is no longer being maintained. Admins should adopt 1.8.6. (Old policy: Receives only bug fixes and security fixes. We do not add any new feature to it, nor backport any new feature.)

TikiWiki 1.8.6 should be used in **production environments**.

TikiWiki 1.9 may be used in **production environments**, there's lots of value added compared to 1.8, see ReleaseProcess192.

TikiWiki 1.10 alias HEAD is the **developer version**, major new features go there.

Please select the version you wish to install from the list, above.

If you feel like testing MapServer with Tikiwiki, check out developments on InstallTikiMapserverGentoo
