

There are several ways to import database-like structures (Trackers with their Tracker fields) and data (Tracker items) into your website. This page will give you a quick overview of the related capabilities in Tiki.

# Import Trackers

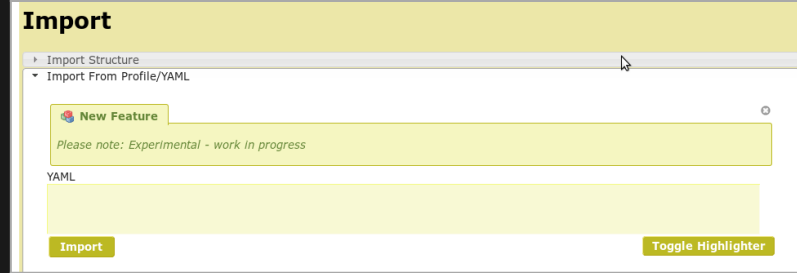

There are several ways to import a tracker, its fields and its data:

## 1ST WAY: IMPORT TRACKER USING ITS STRUCTURE (OWN CODE)

The screenshot shows the Tiki web interface for managing trackers. At the top, there's a 'Trackers' header with a search icon and a 'Trackers' button. Below it, there are tabs for 'Trackers' and 'Duplicate/Import Tracker', with a 'No Tabs' button on the right. The main content area is divided into two sections. The first section is titled 'Duplicate Tracker' and contains a 'Name' input field, a 'Tracker' dropdown menu (currently showing 'Dynamic tracker example'), two checkboxes for 'Duplicate categories' and 'Duplicate permissions', and a 'Duplicate' button. The second section is titled 'Import' and contains a dropdown menu for 'Import Structure' (expanded to show 'Raw data'), a 'Raw data' input field, a checkbox for 'Preserve tracker ID', a 'Note' section with a text area containing the instruction 'Use "Tracker -> Export -> Structure" to produce this data.', and an 'Import' button.

## 2ND WAY: IMPORT TRACKER USING PROFILE/YAML CODE

Click to expand

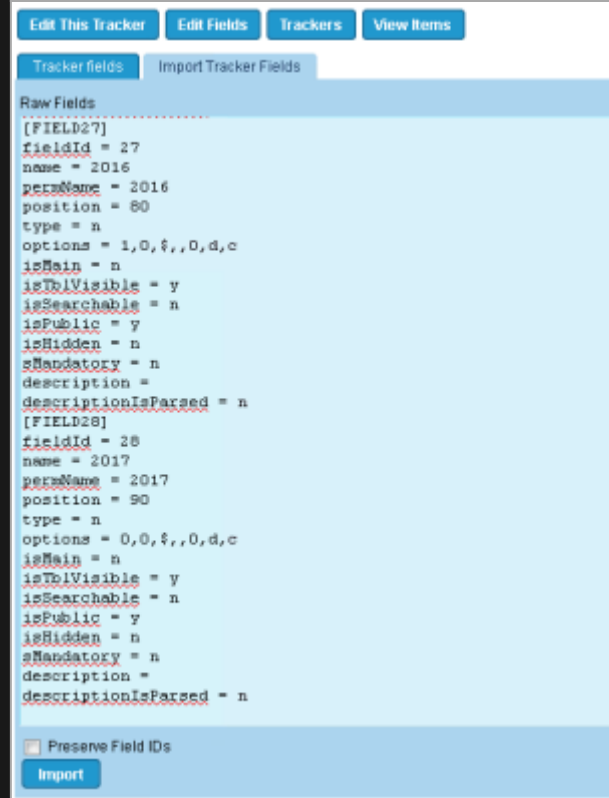

## EXPORT AND IMPORT OF TRACKER FIELDS

In the **Edit Fields** page (/tiki-admin\_tracker\_fields.php?trackerId=) you need to select all fields you want to export with the checkboxes, then at the bottom there is a dropdown where you select **Export Selected**.

This will open a window with the code you need to copy, then paste in to the **Import Tracker Fields** tab.

## IMPORT TRACKER DATA

To import data, you can import data through the other interface:

Click to expand

In order to get the right syntax for the file, you can export your tracker data first, so that you can see an example of how columns are data are formatted. See [Export Trackers](#).

## USE FROM REMOTE SOURCES

You can alternatively use tracker data from remote sources through the **ODBC** read/write support added in [Tiki23](#).

See [ODBC](#)
