

# Integrator Details

## REQUIREMENTS

1. In php.ini `track_errors` should be `On` to be able to show integration error messages in a convenient way (`-$php_errormsg+` - PHP variable used).

---

`;`Store the last error/warning message in `$php_errormsg` (boolean). `track_errors = On`

2. `tiki_p_view_integrator` (see general permissions) needed to view configured repositories
3. `tiki_p_admin_integrator` (see general permissions) needed to configure repositories and rules
