L. Manual Installation

o install Tiki, you basically point your browser to tiki-install.php and follow the instructions. For the vast majority of setups, this works nicely. But what if pesn't work out for you? (special server setup, etc). Don't worry, there is an alternate way to install Tiki. This assumes you use mysql and have access to and know how to use it. Essentially, tiki-install.php does two essential things. It creates your database connection file (db/local.php) and opulates the database with tables & data needed by Tiki.

1.1. Create your db/local.php file
