

Example 1:

Example 2:

Create a page called "Menu", and add 4 links to other pages (one of them, called "Instructions"). Then add a link in your homepage to the same page "Instructions". Then, in the homepage, add this syntax:

```
{WIKIGRAPH(level=>1)}Menu{WIKIGRAPH}
```

You will end up seeing something like this:

The screenshot shows a web page titled "HomePage". At the top right, there are icons for editing, printing, saving, and viewing, along with a "Backlinks..." dropdown menu. The main content area features a graphviz diagram with a central node "Menu" and three nodes it points to: "community", "homepage", and "wiki help". The "homepage" node further points to an "Instructions" node. To the right of the diagram is a "Menu" section with a list of links: "Instructions", "homepage", "community", and "wiki help". Below this list is a yellow highlighted box with the text "This is just a sample menu - edit it". Further down is a "My account" section with a home icon and a list of links: "Home Page", "Last changes", "Forums", and "FAQS". At the bottom left, there is a message: "Thank you for installing the Collaborative Community Profile" followed by a recommendation to visit the "Instructions" page.

You need GraphViz
