

It makes a graph with all the linked pages from your page. Works well with [Tiki3 LTS](#), but not with [Tiki6 LTS](#).

EXAMPLE 1:

EXAMPLE 2:

Create a page called "Menu", and add 4 links to other pages (one of them, called "Instructions"). Then add a link in your homepage to the same page "Instructions". Then, in the homepage, add this syntax:

```
{WIKIGRAPH(level=>1)}Menu{WIKIGRAPH}
```

You will end up seeing something like this:

The screenshot shows a Tiki Wiki homepage. At the top right, there are icons for editing, printing, saving, and a search bar labeled 'Backlinks...'. The main heading is 'HomePage'. Below it is a diagram showing a 'Menu' box with arrows pointing to 'community', 'homepage', and 'wiki help'. From 'homepage', an arrow points to 'Instructions'. To the right is a 'Menu' section with a list of links: 'Instructions', 'homepage', 'community', and 'wiki help'. Below this is a yellow highlighted text box that says 'This is just a sample menu - edit it'. Further down is a 'My account' section with a house icon. At the bottom right, there is a list of navigation links with yellow arrow icons: 'Home Page', 'Last changes', 'Forums', and 'FAQS'. Below the diagram, there is a message: 'Thank you for installing the Collaborative Community Profile' followed by 'We recommend you visit the [Instructions](#) page to learn how to manage and use this profile'.

You need [GraphViz](#)

See in action here:

<http://workflow.tiki.org/graphviz>
