MODULE LAST_TRACKER_ITEMS

PARAMETERS

Displays the value of a field of the specified number of tracker items. If the specified tracker has no main field, either Field name or Field identifier is required.
Required parameters are in **bold**.
Go to the source code
Preferences required: feature_trackers

Parameters	Accepted Values
trackerId	int
name	any string except for HTML and PHP tags

Description

Identifier of the tracker from which items are listed. Example value: 13.

Name of the field from which values are listed. Example value: age.

Default   Since

| `sort_mode` | any string except for HTML and PHP tags |
| `status` | word |

Specifies how the items should be sorted. Possible values include created and created_asc (equivalent), created_desc, status, lastModif, createdBy and lastModifBy. Unless "_desc" is specified, the sort is ascending. "created" sorts on item creation date. "lastModif" sorts on the last modification date of items. "lastModif_desc" sorts in descending order of last modification date. Default value: created_desc

If set, limits the listed items to those with the given statuses. Values are combinations of "o" (open), "p" (pending) and "c" (closed). Possible values: opc, oc, op, pc, o, p or c. Default value: opc

`fieldId` int

Identifier of the field from which values are listed. If Field name is set, this parameter is ignored. Example value: 13.

The other traditional modules params apply:
nonums

NOTES

- In tw>=3.0, You can either give the field name, or the fieldId, or indicate no field. In the last case
  the system will automatically take the first main field.
- Be careful than if you change the name of the field in the tracker administration, the module
  parameter name will not be changed
