

# Multi-print

---

This page and tiki-print\_pages.php should be added to refactor list because the applicable screen shots are at the latter, where there is no description.

---

This page needs review as I have added a bit more than the initial stub. Some description of how multi-print is different from Print Indexed would also be helpful.

---

This is similar but different than Print Indexed.

Multi-print permits printing many pages at once. The options, which may be mixed, include

- print an entire Structure.
- print selected pages (independently or selected from a Structure

Multi-print must be enabled as an option in the Wiki feature of the Administration menu.

Screenshots are seen at [Print Multiple Pages](#)

- **MultiPrint**
