

# Plugin Group

Use this [wiki plugin](#) to display content based on the user's [groups](#) or friends. It is similar to [PluginPerm](#).

## PARAMETERS

Display content based on the user's groups or friends

*Introduced in Tiki 1.*

[Go to the source code](#)

*Preferences required: wikipugin\_group*

### Parameters

(body of plugin)

### Accepted Values

`friends`

`username`

## Description

Wiki text to display if conditions are met. The body may contain `{ELSE}`. Text after the marker will be displayed to users not matching the conditions.

Pipe separated list of users whose friends are allowed to view the block. Example: `admin|johndoe|foo`

Default	Since
	4.0

## NOTES ON USAGE

- The `{ELSE}` part is optional.
- The `groups` and `notgroups` parameters may be used at the same time.

- Groups can be included in other groups, and this can impact how this plugin behaves. For example, if you want a section to be seen by the group A and the group Admins ( `groups="Admins|A"` ), and not by group B ( `notgroups="B"` ), be careful not to include group B in the Admins group . If Admins includes A and B, Admins will not see the section.

## EXAMPLES

### BASIC SYNTAX

---

```
{GROUP(groups="Registered|Admins" notgroups="Editors")}show this content for users included/excluded from groups specified in the parameters{ELSE}otherwise show this content{GROUP}
```

## SECURITY

Use of this plugin to hide sensitive information will not prevent it from being revealed to users with permissions to view or edit the page source. Users that have a Watch on the wiki page will receive an email with the entire wiki page source, thus revealing the information regardless whether the content would be hidden because of this plugin.
