

LIST - Graphical User Interface

New in Tiki 17.0 - Experimental Graphical User Interface for the list plugin in popup plugin edit forms.

LIST - Graphical User Interface allows you to use the plugin List graphically, you get the same results as when you manipulate the code of the plugin List in a Wiki page. Of course, with ListGUI, you can find yourself more easily and get the results faster even if you are a beginner.

Please note this is very experimental still (in 17.0) so expect some hiccups.

PARAMETERS

Search for, list, and filter all types of items and display custom-formatted results.

Introduced in Tiki 7.

Use the graphical user interface for editing this list plugin.

Sticky Headers for the table when scrolling top Default value: No

Purge the cache when the type:id objects are updated. Set id=0 for any of that type. Or set type:withparam:x. Examples: trackeritem:20, trackeritem:trackerId:3, file:galleryId:5, forum post:forum_id:7, forum post:parent_id:8. Note that rule changes affect future caching, not past caches.

QUICK START

Quick start you'll need to go to Control Panels -> Editing and Plugins -> Plugins and enable the feature "GUI for the list plugin".

Then create a wiki page, at this level, you can either simply add `{list}`, save it and click the edit plugin icon:  or make another choice, In edit mode of the Wiki page, by clicking question icon:  on the tab to display the plugin help, and filtering the list of plugins for the plugin List.

See [Plugin Help](#) for more information on using the plugin help.

You can see how ListGUI looks like in the images below:

Parameters

The screenshot shows a dialog box titled "List" with a close button (X) in the top right corner. It contains several configuration options:

- Searchable Only Results:** A dropdown menu with a downward arrow. Below it, the text reads: "Only include results marked as searchable in the index."
- Use List GUI:** A dropdown menu with a downward arrow. Below it, the text reads: "Use the graphical user interface for editing this list plugin."
- Cache Output:** A dropdown menu with "Yes" selected and a downward arrow. Below it, the text reads: "Cache output of this list plugin."
- Cache Expiry Time:** An empty text input field. Below it, the text reads: "Time before cache is expired in minutes."
- Cache Purge Rules:** An empty text input field. Below it, the text reads: "Purge the cache when the type:id objects are updated. Set id=0 for any of that type. Or set type:withparam:x. Examples: trackeritem:20, trackeritem:trackerid:3, file:galleryid:5, forum post:forum_id:7, forum post:parent_id:8. Note that rule changes affect future caching, not past caches."
- ID of MULTISEARCH block from which to render results:** An empty text input field. Below it, the text reads: "This is for much better performance by doing one search for multiple LIST plugins together. Render results from previous {MULTISEARCH(id-x)...[MULTISEARCH]} block by providing the ID used in that block."

Click to expand

(body of plugin)

The screenshot shows the body of the plugin configuration dialog box. It features a toolbar with the following buttons: "filter" (with a downward arrow), "sort" (with an upward arrow), "pagination" (with a downward arrow), "output" (with a rightward arrow), "format" (with a rightward arrow), and "Source" (with a list icon). Below the toolbar, the text "List configuration information" is displayed. At the bottom right, there are two buttons: "Close" (purple) and "Save" (blue).

Click to expand

OVERVIEW

ListGUI is an easy to use tool with which you can get rich and interesting results. It allows you to control the results you want to have in a graphical way and also provides you with the generated code.

ListGUI offers you options according to your choices. For example, if you choose **forum post** as an option for **Filter type**, the options for **Filter field** will be adapted to your selection: `post_content`, `forum_id`, `forum_title`, etc.

The image shows a configuration window titled "List" with a close button (X) in the top right corner. The window contains several settings:

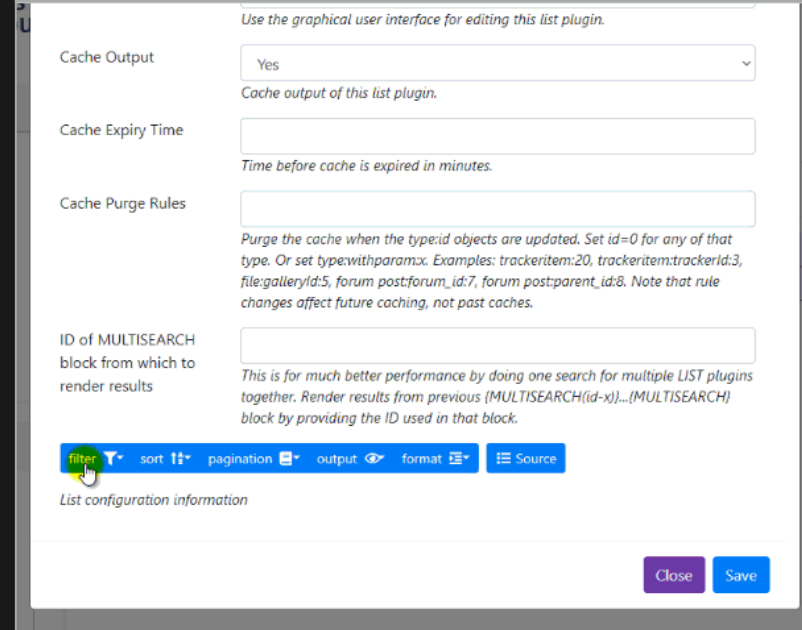

- Searchable Only Results:** A dropdown menu with a downward arrow. Below it is the text: "Only include results marked as searchable in the index."
- Use List GUI:** A dropdown menu with a downward arrow. Below it is the text: "Use the graphical user interface for editing this list plugin."
- Cache Output:** A dropdown menu with "Yes" selected and a downward arrow. Below it is the text: "Cache output of this list plugin."
- Cache Expiry Time:** An empty text input field. Below it is the text: "Time before cache is expired in minutes."
- Cache Purge Rules:** An empty text input field. Below it is the text: "Purge the cache when the type:id objects are updated. Set id=0 for any of that type. Or set type:withparam:x. Examples: trackeritem:20, trackeritem:trackerId:3, file:galleryId:5, forum post:forum_id:7, forum post:parent_id:8. Note that rule changes affect future caching, not past caches."
- ID of MULTISEARCH block from which to render results:** An empty text input field. Below it is the text: "This is for much better performance by doing one search for multiple LIST plugins"

HOW TO ADD CONTROL BLOCKS

Add filter

Use a filter to perform a search and collect a set of results according to different parameters that you will pass to the **Filter** control block. You can get more information about the Filter control block on the page [PluginList filter control block](#)

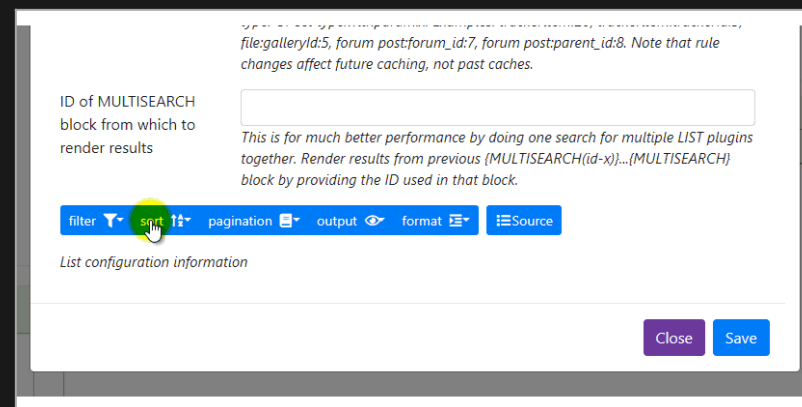

It is simple and convenient to apply a filter to search results with ListGUI as you can see in the image below.

Click to expand

Add sort

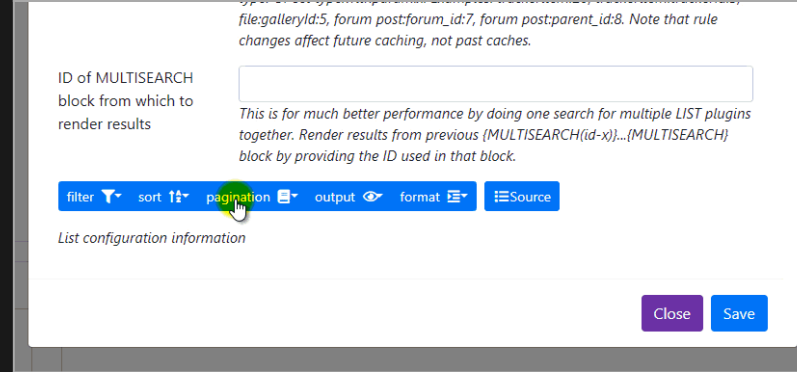

With the **Sort** option of ListGUI to sort your search results with the mode you want. See how this is done with the [PluginList sort control block](#)

Click to expand

Add pagination

Use the **Pagination** to limit the number of results to be displayed on the Wiki page. Learn more about [PluginList - list or pagination control block](#)

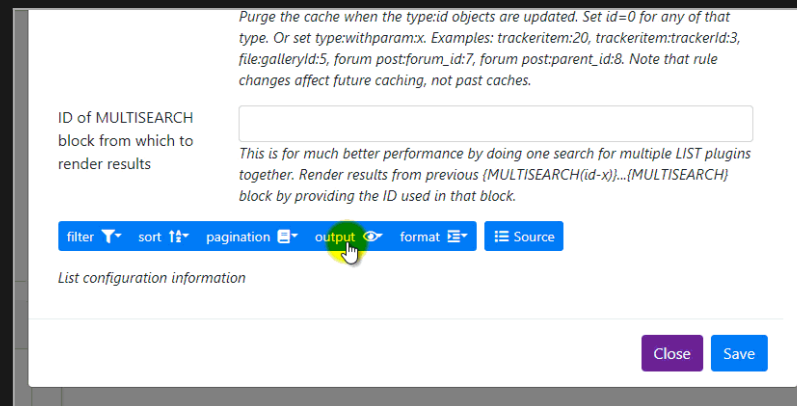

Click to expand

Add Output

Use this part of ListGUI to define the model for displaying results.

The elements are added to OUTPUT according to parameter values passed to OUTPUT.

For example, if you choose the value **table** of the parameter **template**, ListGUI proposes you **column** and **tablesorter**

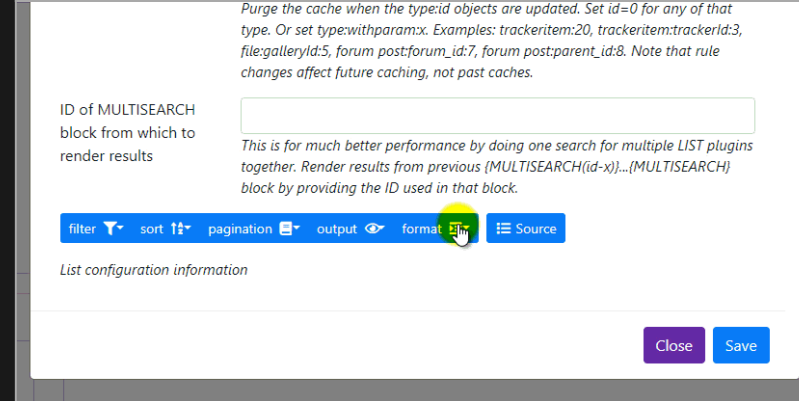

Click to expand

Add Format

You can apply the object format with the ListGUI interface with the **FORMAT** option.

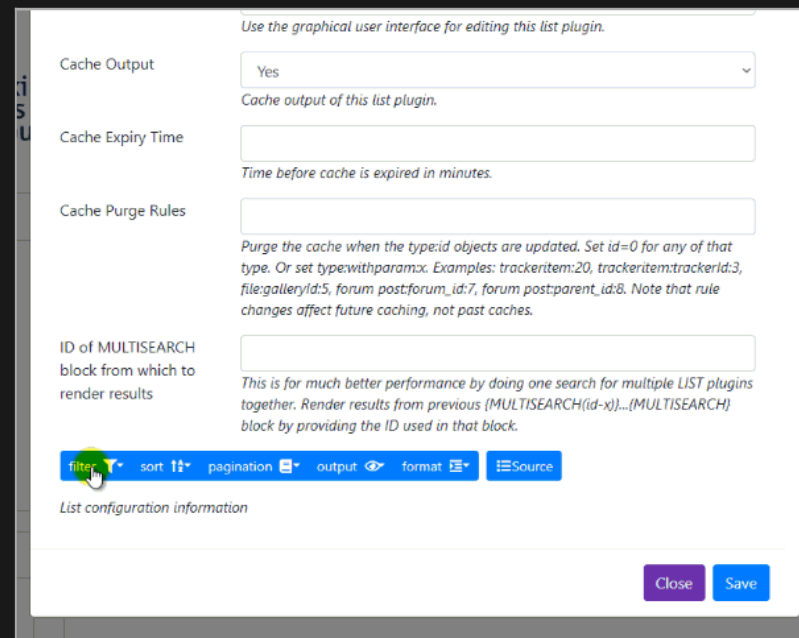

See how [PluginList format control block](#) is used

Click to expand

Toggle source mode

When you choose different options with ListGUI, it also generates the code that will appear in the Wiki page after clicking on the **Save** button. You have the possibility to see the code, modify it and even delete everything. See how this is possible in the image below

Click to expand

You can now use ListGUI to get a successful result and according to what you want.

EXAMPLES

For this example, we needed a Tracker that we called **Months**, you can see it as a profile here [Example_Tracker_Months](#).
Otherwise, have more information on [Trackers](#).

With ListGUI, in this example, we implement a List to display the different items (months, number of days) recorded in the Tracker.

The screenshot shows the 'List' configuration window with the following settings:

- Searchable Only Results:** A dropdown menu.
- Use List GUI:** A dropdown menu with a yellow circle highlighting it. Below it is the text: "Use the graphical user interface for editing this list plugin."
- Cache Output:** A dropdown menu set to "Yes". Below it is the text: "Cache output of this list plugin."
- Cache Expiry Time:** An empty text input field. Below it is the text: "Time before cache is expired in minutes."
- Cache Purge Rules:** An empty text input field. Below it is the text: "Purge the cache when the type:id objects are updated. Set id=0 for any of that type. Or set type:withparam:x. Examples: trackeritem:20, trackeritem:trackerId:3, file:galleryId:5, forum post:forum_id:7, forum post:parent_id:8. Note that rule changes affect future caching, not past caches."
- ID of MULTISEARCH:** An empty text input field.

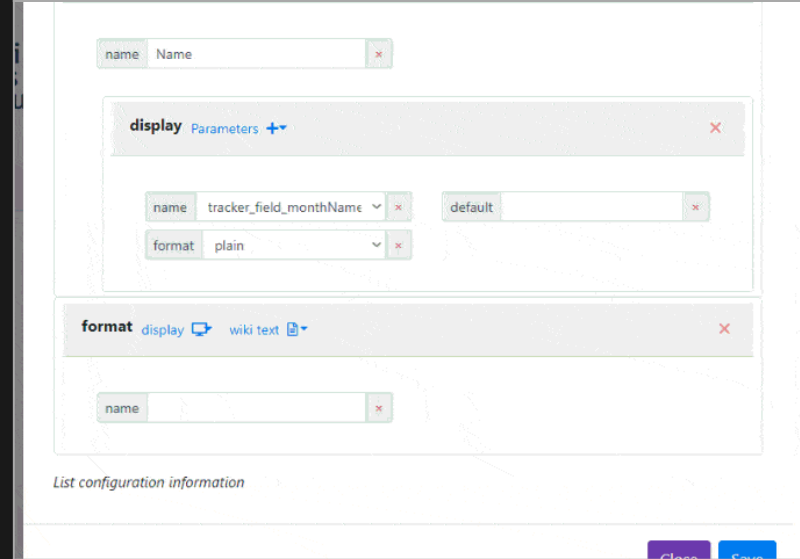

Click to expand

The screenshot shows the expanded configuration window with the following settings:

- type:** trackeritem
- filter Parameters:**
 - field: tracker_id
 - exact: 3
- output column | tablesorter | Parameters:**
 - template: table
 - column Parameters:**
 - field: tracker_field_monthName
 - label: Month

Click to expand

Click to expand

After the List is built with ListGUI, the following code will be in the page

```
{LIST(gui="1" cache="y")} {filter type="trackeritem"} {filter field="tracker_id" exact="3"} {OUTPUT( template="table")}  
  {column field="tracker_field_monthName" label="Month" mode="raw"} {column field="tracker_field_monthDays"  
label="Days" mode="raw"} {OUTPUT} {FORMAT( name="Name")} {display name="tracker_field_monthName" default=""  
format="plain"} {FORMAT} {FORMAT( name="Days")} {display name="tracker_field_monthDays" format="plain" default=""}  
  {FORMAT} {LIST}
```

This second example shows how from ListGUI you can build a simple List that searches and displays in a Wiki page the title and content of comments added to Tiki, for example with the Blog feature.

Cache Purge Rules

Purge the cache when the type:id objects are updated. Set id=0 for any of that type. Or set type:withparam:x. Examples: trackeritem:20, trackeritem:trackerId:3, file:galleryId:5, forum post:forum_id:7, forum post:parent_id:8. Note that rule changes affect future caching, not past caches.

ID of MULTISEARCH block from which to render results

This is for much better performance by doing one search for multiple LIST plugins together. Render results from previous {MULTISEARCH(id-x)}...{MULTISEARCH} block by providing the ID used in that block.
