Plugin LS Dir

Use this wiki plugin to list files in a directory. LS comes from the shell command `ls` for listing file information. See also PluginLocalFiles.

PARAMETERS

List files in a directory
Introduced in Tiki 1. Required parameters are in `bold`.
Go to the source code
Preferences required: wikiplugin_lsdir

Parameters	Accepted Values
dir	
filter	
limit	digits

Description

Full path to the server-local directory. Default is the document root.

Only list files with file names that contain this filter. Example: `.jpg`

Maximum amount of files to display. Default is no limit.

Default	Since
	1
	1
0	1

`urlprefix`   url

`sort`   (blank)

                name

                size

                atime

                ctime

                mtime

Make the file name a link to the file by adding the URL path preceding the file name. Example: `http://yoursite.com/tiki/`

Set the sort order of the file list

1

name 1

EXAMPLE

{lsdir dir="/lib/" urlprefix="http://localhost" sort="name" filter=".php" limit="5"}
