Introduction

PluginPDFpage is another wiki plugin for mPDF. Its function is to customize page settings for PDF output of any specific page (also works over multiple pages).

PluginPDF sets parameters for the wiki page, while PluginPDFpage changes the parameters just for a specific blob of text.

An example of usage is to switch from portrait to landscape for one large table, and to change back after the table.

Plugin Parameters

Insert page with new settings in PDF

Introduced in Tiki 18.

Go to the source code

Preferences required: wikiplugin_pdfpage

Parameters	Accepted Values	Description	Default	Since
(body of plugin)		Page Content
