

PluginPreview

A [Wiki Plugin](#) added to [Tiki18](#)

A Wiki Plugin to preview files from the file gallery. Allows the user to generate animated gifs from videos, and scaled previews for images and videos.

Starting in [Tiki20](#), can preview more file types via [unoconv](#). It requires appropriate tools on the server to convert file to HTML. See requirements at <https://packagist.org/packages/media-alchemist/media-alchemist> , and these have been added to Tiki [Check](#).

Parameters

Enabled to generate preview of images or video files
*Introduced in Tiki 18. Required parameters are in **bold**.*

[Go to the source code](#)

Preferences required: wikipugin_preview

Parameters	Accepted Values
------------	-----------------

fileId	int
---------------	-----

Description

Id of the file in the file gallery

Default	Since
