

Plugin Report

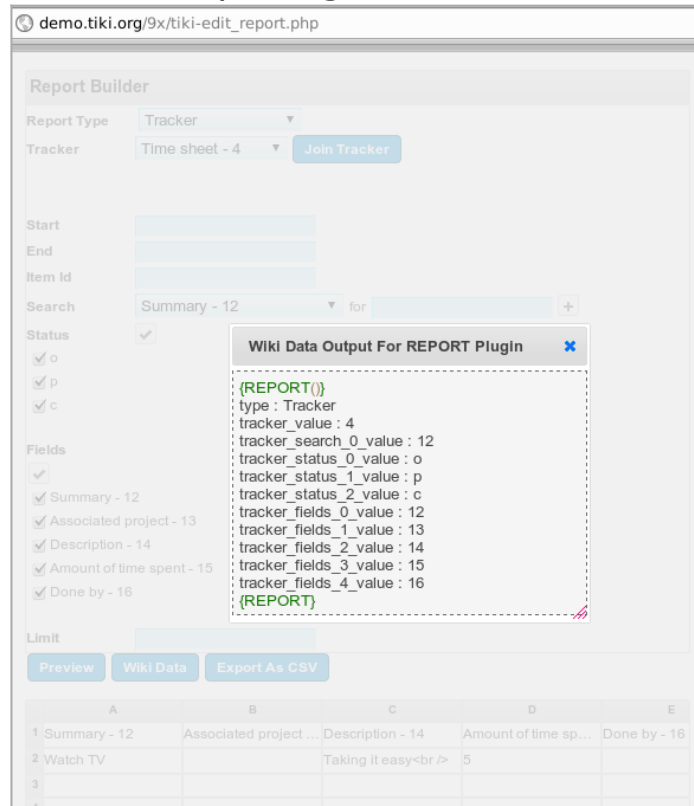

Introduced in Tiki9, use this wiki plugin to build a Report, store it in a wiki page, and edit it from the page itself.

Parameters

Tiki Doc From Code error: reportplugin not found

Examples

Example of code to use for a report, generated from the edit report interface:

The screenshot shows the Tiki Report Builder interface. The report type is set to 'Tracker' and the tracker is 'Time sheet - 4'. The search criteria are 'Summary - 12'. The status is set to 'o', 'p', and 'c'. The fields selected are 'Summary - 12', 'Associated project - 13', 'Description - 14', 'Amount of time spent - 15', and 'Done by - 16'. A 'Wiki Data Output For REPORT Plugin' window is open, displaying the following PHP code:

```
{REPORT()}
:type : Tracker
:tracker_value : 4
:tracker_search_0_value : 12
:tracker_status_0_value : o
:tracker_status_1_value : p
:tracker_status_2_value : c
:tracker_fields_0_value : 12
:tracker_fields_1_value : 13
:tracker_fields_2_value : 14
:tracker_fields_3_value : 15
:tracker_fields_4_value : 16
{REPORT}
```

Below the code, a table preview is visible with the following data:

	A	B	C	D	E
1	Summary - 12	Associated project ...	Description - 14	Amount of time sp...	Done by - 16
2	Watch TV		Taking it easy 	5	
3
