

Plugin Report

Introduced in Tiki9, use this wiki plugin to build a Report, store it in a wiki page, and edit it from the page itself.

Parameters

Tiki Doc From Code error: reportplugin not found

Examples

Example of code to use for a report, generated from the edit report interface:

The screenshot shows the 'Report Builder' interface on a web page at demo.tiki.org/9x/tiki-edit_report.php. The 'Report Type' is set to 'Tracker' and the 'Tracker' is 'Time sheet - 4'. A 'Join Tracker' button is visible. The 'Search' dropdown is set to 'Summary - 12'. The 'Status' dropdown has 'o', 'p', and 'c' selected. The 'Fields' dropdown has several items selected, including 'Summary - 12', 'Associated project - 13', 'Description - 14', 'Amount of time spent - 15', and 'Done by - 16'. A 'Wiki Data Output For REPORT Plugin' dialog is open, displaying the following JSON-like code:

```
{REPORT()  
type : Tracker  
tracker_value : 4  
tracker_search_0_value : 12  
tracker_status_0_value : o  
tracker_status_1_value : p  
tracker_status_2_value : c  
tracker_fields_0_value : 12  
tracker_fields_1_value : 13  
tracker_fields_2_value : 14  
tracker_fields_3_value : 15  
tracker_fields_4_value : 16  
(REPORT)}
```

Below the dialog, there are 'Preview', 'Wiki Data', and 'Export As CSV' buttons. A preview table shows the following data:

A	B	C	D	E
1 Summary - 12	Associated project - 13	Description - 14	Amount of time sp...	Done by - 16
2 Watch TV		Taking it easy 	5	
3
