PluginTikiManagerClone

This is a Wiki Plugin which embeds a button in a wiki page to perform a pre-configured clone or clone and upgrade action of an instance in Tiki Manager

This makes it simple for operations like:

- Clone from production to staging
- Clone from staging to production
- etc.

Like PluginTikiManagerUpdate, it requires the Tiki Manager Package

PARAMETERS

Make on demand clone of an instance to another
Introduced in Tiki 25. Required parameters are in `bold`.
Go to the source code
Preferences required: feature_tiki_manager, wikiplugin_tikimanagerclone

Parameters	Accepted Values

Description

Default **Since**

(body of plugin)

`branch`	string
`source`	string
`target`	string
`timeout`	int
`direct`	1
	0

Button text(The text that will be displayed on the clone instance button).

Select branch.

Source instance(instance to clone) ID or name.

Destination instance(s) ID or name, comma separated in case of multiple instances.

Modify the default command execution timeout from 3600 seconds to a custom value

Prevent using the backup step and rsync source to target.

3600	25.0
1	25.0

`ignoreRequirements`	0
	1
`mode`	clone
	upgrade
`skipCacheWarmup`	0
	1
`skipReindex`	0
	1
`stash`	0
	1

Ignore version requirements. Allows to select non-supported branches, useful for testing.

Clone mode(Clone or Upgrade). The Clone mode allows to make a clone only and the Upgrade mode, to make a clone with an extra upgrade operation.

Skip generating cache step. (Only in upgrade mode).

Skip rebuilding index step. (Only in upgrade mode).

Saves your local modifications, and try to apply after update/upgrade

0	25.0
