trackerId

text

*separator:* :

copies\_on\_load

int

itemId

text

return\_array

text

updateFieldValues

text

*separator:* || :

Tracker from which to copy item, joined tracker ids separated by `:`

Set the number of copies to make on load of plugin automatically

ID of item to make copy of, otherwise input is asked for

If Yes (`y`), returns array of new information instead of displaying results to screen, used in non-interactive mode

New values to replace for the field IDs specified, separated by `:`, joined fields separated by `||`.

`randomstring` will generate random string; and `f_xx` to use value of field `xx` of `itemId`
