

Plugins tab

Overview

Use this tab to enable a specific [Wiki Plugin](#)

To Access

From the [Editing and Plugins](#) page, click the **Plugins** tab.

Note

The plugins listed on this tab correspond to the PHP files in your `../lib/wiki_plugins/` directory. If you recently installed a new plugin, you may need to clear the Tiki cache.

Option

Automatically approve wiki-plugins on pages installed by profiles

Description

Some wiki-plugins require admin approval before they are executable. If turned on, then all wiki-plugins that are on wiki pages created via profiles are automatically approved.

 *Make sure your profiles are not executable or editable by untrusted users.*

Default

Disabled

Option

Plugin pending approval notification

Default for img-fluid class used in the IMG plugin

Maximum plugin parsing passes

Description

Send an email alert to users with permission to approve plugins when a plugin approval is pending

Default option for whether an image produced with the IMG plugin has the img-fluid class - a plugin parameter allows this to be overridden

Affects the number of wiki plugins that can be used. The default of 500 allows for 1 plugin nested seven times, or 44 plugins nested once. A value of 1200 is required for 1 eighth level plugin.

 *Setting this to a higher value than the default of 500 may have performance implications.* 

Default

Disabled

Enabled

500 passes

Option

Allow plugin-specific edits

Only display focused edit icons (for sections and/or plugins) on request

GUI for the list plugin

Description

Add an icon next to each plugin usage to enable editing the plugin in a popup form, without needing to edit the whole page. This feature is unavailable outside wiki pages, whether or not this preference is enabled.

Focused edit icons will only display after a per-session "Edit icons" preference is enabled. This preference is defined directly from any wiki page.

Experimental GUI for the list plugin in popup plugin edit forms. (listgui)

Enabled

Option

Plugin trackerlist converter

Plugins tab of the textarea control panel loads with an empty list

Description

Button on trackerlist and trackerfilter plugins edit form to convert them to use the list plugin instead. 🧪

Improve the performance of the textarea control panel by avoiding the loading of all plugins initially

⚠️ *Some plugins may not appear. When using the MySQL engine, can have problems with short plugin names (for MyISAM, those under "ft_min_word_len").* 🧪

Default

Disabled

Disabled

Unable to load the jQuery Sortable Tables feature.
