Search Engine Friendly URL

Overview

This feature shortens and simplifies URLs, which make them both more friendly for users and for search engines

To access

Click the **SEFURL** icon ⊕ on the Admin Panel

or Access **http://example.org/tiki-admin.php?page=sefurl**

×

⚠ Important Note

Search Engine Friendly URLs will not work unless the .htaccess file is enabled. *Instructions for enabling .htaccess*

This setting may bring down your website if there is an issue with your .htaccess file.
Prior enabling this option check you have access to your database to disable it manually in case of.
Do not use this feature when installing Tiki on IIS server.

Option

Search engine friendly URL

Canonical URL tag

HTTPS for user-specific links

Description

If the site is using Apache, you can rename _htaccess as .htaccess to use short URLs. On IIS, rename web_config as web.config

Indicates to search engines which URL to use, to prevent duplicate listings

When building notification emails, RSS feeds, the canonical URL or other externally available links, use HTTPS when the content applies to a specific user. HTTPS must be configured on the server.

Disabled

Enabled

Disabled

Option

Canonical URL domain

Wiki URL scheme

Description

If this is a testing site with duplicate content, you may want to put the real site domain here so search engines don't index the testing site. In complex perspective setups using multiple domains, you may want more control on which canonical domain is advertised.

Alter the SEFURL pattern for page names.
