

# User Mentions

*Introduced in Tiki20*

This feature converts any wiki syntax written as `@username` in all text areas to the existing actual Registered user link. In order to *mention* users on Wiki pages etc. a Tiki admin needs to enable "Tagging users" preference under *User Features > User Account Features* on the **User Settings** (<tiki-admin.php?page=user>) control panel first.

## Examples

# Example 1

*This code:*

---

@luci

*Would produce on this site:*

@luciash d' being ðŸ§™
