

Test Page

BERNARD TEST FOR VIDEO

HTML FOR BOOTSTRAP 5.3

It is not possible to add a class in the Wikiplugin (which is another consistency issue between wiki plugins) so it have to be added in the parent div.

Ignore this, just a page for testing.

Test Saturday 28 September, 2024 14:18:51 UTC

I don't ignore pages

ÃfÆ'Ã†â€™ Ãfâ€ Åçâ,¬â,,çÃfÆ'Ãçâ,¬Å;Ãfâ€šÃ,Â°ÃfÆ'Ãçâ,¬Â;Ãfâ€šÃ,Â,ÃfÆ'Ãçâ,¬Â¹Ãfâ€|Ãçâ,¬Â“ÃfÆ'Ãçâ,¬Â;|

Just another testing line...

This will break this page:

demo.tiki.org/9x/tiki-edit_report.php

Report Builder

```

... will show this video

D. 4 : 3 RATIO IFRAME

"This code ..."

```
{HTML()} <div class="embed-responsive embed-responsive-4by3"> <iframe  
src="https://www.youtube.com/embed/2c7pVXTGZSI" allowfullscreen="y"></iframe> </div> {HTML}
```

... will show this video

FOR TIKI 7

- 28 may - jb here testing saving ajax errors
- Maybe try without having done a preview...
- what else could it be? 3 saves and no error (in Firefox 4.0.1)
- trying the click on save directly thing... seemed fine
- maybe if you edit for ages?
 - I bet it only happens when you really don't want it to...

- trying with pop-up preview...
- Seems the auto save timer is broken

Æ'Ä™ Æ Æ, Æ, Æ'Ä, Æ; Æš, Æ° Æ'Ä, Æ| Æš, Æ, Æ'Ä, Æ¹ Æ| Æ, Æ" Æ'Ä, Æ ÆÄ Æ, Æ; Æ, Æ Æ¹ Æ... Æœ

- Wonder if that magnify icon to open/close the preview pane is the right icon?
 - Probably not...
- I also wonder if there are any docs about this *new* preview thing?

Have to go out now, will try more later.

PREVIOUSLY ON TIKI 6

- In Safari if you make a change and then click directly on the save button you sometimes get an alert about an undefined and irrelevant AJAX error.
 - Fixed (as far as i can tell)
