Example: A "public" category for anonymous users. If the global permissions in tikiwiki are set such that anonymous users cannot see wiki pages, then you can define a category called *public*, which does allow the [group](#) anonymous users to view the content. Then by adding a wiki page to category *public* - this page will now be visible without logging in.

Categories can also be used to aid navigation or create a [taxonomy](#) of objects. Categories are a tool that persists for all features, not just for wiki or articles or trackers. Depending on the settings, category listings can be displayed in a side module, above or below the content. [Menus](#), [modules](#) and [structures](#) are also used for navigation, and categories for access control. Articles also use [topics](#) for classification.

### Key Functioning and sub-features

- Organize categories in a tree hierarchy with unlimited subcategories.
- Assign objects to one or many categories
- Administrators can apply different permissions to different categories.
- Administrators can apply different themes to different categories.
- Deep search into subcategories from the [category browser](#)
- On wiki pages, you can show the category path and/or show objects in the same category(ies)
- Manage [Category Transitions](#) (Tiki4)

## Category Permissions

The way that category permissions work has changed substantially over time.

Up to version 1.9.11, a user with edit permission for a type of object is allowed to edit any object which they can view. In version 2.0 the *tiki\_p\_edit\_categorized* permission allows editing of objects with the user's categories. See also *Categories Details*.

Starting in *Tiki4*, all permissions can be added to categories, and *Category Transitions* are introduced.

By changing the theme from one category to the next it is possible to create visually distinct "zones" in a tikiwiki site.

#### Related Plugins

- [PluginCategory](#) - creates a table of contents using categories.
- [PluginCatpath](#) - creates a "breadcrumbs" trail
- [PluginCatorphans](#) - displays uncategorized pages.
