Cypht is a webmail aggregator. It was picked to become Tiki's webmail component.

So what features go to Cypht vs Tiki?

Cypht is a standalone webmail and an independent project. However, in the last few years, Tiki developers have had a preponderant influence because they contributed a lot of code.

As much as reasonably possible, we add features to Cypht to make them available to a boader community.

If you use Cypht, and are ÃƒÆ'Ã†â€™Ãƒâ€¦Ã¢â‚¬â„¢lacking some features, you will likely find them in Tiki.

How Cypht and Tiki are converging

- License
- Dependencies
- Lifecycle

What Tiki does extra

- Part of Email filters
- Calendar Invitations by email
- More advanced Contacts
