Overview

Use this tab to configure the general settings for most textarea and text entry fields.

- [Wiki](#)
- [WYSIWYG](#)

To Access

From the [General Admin](#) page, click the **General Preferences** tab.

Option	Description	Default
Full screen	Allow users to activate full-screen mode.	
Use file galleries to store images	If not enabled, images will be stored in the file system, in the /img/wiki_up directory, instead.	
Dynamic content system	Block of content which can be reused and programmed (timed)	
Search and replace	Enables finding and replacing of content in the edit box	
Code editor (CodeMirror)	CodeMirror code editor, which provides syntax highlighting	
Syntax highlighter (CodeMirror) Theme	CodeMirror themes (clear cache after changing)	
Full WYSIWYG editor	WYSIWYG is an acronym for "What You See Is What You Get". CKEditor is used to provide a word-processor-like editing experience.	
Ajax auto-save	Save content during editing, enabling work to be recovered after any interruption. Also enable a real-time preview. This option is required for WYSIWYG plugin processing.	
Preview Edits	Add a preview tab to text areas.	
Smileys	Also known as emoticons	
Wiki paragraph formatting	When the wiki paragraph formatting feature is on, all groups of non-blank lines are collected into paragraphs. Lines can be of any length, and will be wrapped together with the next line. Paragraphs are separated by blank lines. When the Wiki paragraph formatting feature is off, each line will be presented as you write it. This means that if you want paragraphs to be wrapped properly, a paragraph should be all together on one line.	
Create line breaks within paragraphs	When Wiki paragraph formatting is enabled, this option creates line breaks within paragraphs.	
Parse wiki syntax in comments	Parse wiki syntax in comments in all sections apart from Forums Use "Accept wiki syntax" for forums in admin forums page	
Automonospaced text	Lines indented with spaces will automatically be converted to monospace font.	

Option	Description	Default
Tables syntax

Dynamic variables	Global snippets of text that can be included in wiki pages and edited in place.	
Multilingual dynamic variables	Make dynamic variable content language-specific.	
Multilevel style numbering for ordered lists	Make ordered list items display unique numbers for all levels of their sub-items; for example: 1.1, 1.2, 1.2.1, 1.2.2, etc.	
Convert from absolute to relative link	Process wiki text and convert internal links from absolute to relative links	
Markdown	Support markdown syntax.	
Github-flavored markdown	Enable Github-flavored markdown.	
Default syntax	Which syntax to use as the default wiki syntax when a new content block is created.	
Enable Typography Features	Features to replace normal characters with typographic equivalents	
Smart “curly” quotes	Convert "straight" quotes to “curly” ones, also convert ' apostrophe and ‘single’ quotes	
Convert approximative ASCII quotes	Convert plain-ASCII quote substitutes ` ` " „ << >> to their typographic equivalent “ ” „ « »	
Smart em-dash and ellipsis	Convert double hyphen — to em-dash — and three consecutive dots ... to typographic ellipsis character...	
Smart no-break space	Prevents line breaks from occurring at unfortunate places in the text by replacing regular space character with no-break spaces where appropriate: around some punctuation, when used as thousand separator, and between a unit abbreviation and the number preceding it.	
Plugin Add Bibliography	Add bibliography listing in the footer of a wiki page	
Plugin Add Reference	Add a bibliography reference.	
Plugin Anchor Link	Create a link to an anchor	
Plugin Anchor Name	Create an anchor that can be linked to	
Plugin Box	Create a formatted box with a title bar
