The screenshot shows the Joomla! Security configuration page. At the top, there's a 'Security' header with a help icon. Below it are several tabs: 'General Security', 'Spam protection', 'Search results', 'Site Access', 'Tokens', and 'Clipperz online password management'. The 'General Security' tab is active. It contains several settings:

- Smarty Security (with an info icon and a warning triangle)
- HTML Purifier (with a help icon). Below it, a note reads: "If you are trying to use HTML in your pages and it gets stripped out, you should make sure your HTML is valid or de-activate this feature."
- Output should be HTML Purified (with a help icon and a warning triangle)
- REALLY allow HTML (INSECURE) (with a help icon). Below it, a red warning box says: "You need to set Allow HTML in menu option names and URLs"
- Protect all sessions (with an info icon)

Below these settings, there's a note: "Please also see: HTTPS (SSL) and other login preferences".

The 'CSRF Security' section is expanded, showing:

- Use these options to protect against cross-site request forgeries (CSRF).
- Require confirmation if possible CSRF detected (with an info icon)
- Protect against CSRF with a ticket (with an info icon)

At the bottom right of the configuration area, there is an 'Apply' button.
