

# Google Web Fonts

It's quite easy to use [Google Fonts](#) in Tiki!

See also: [PluginFont](#)

## How to configure

The screenshot shows the Tiki theme configuration interface with the following sections:

- Theme Generator (Experimental):** Includes a checkbox for "Theme Generator" and a warning icon.
- Custom Codes:** Contains a "Custom CSS" section with a text area containing the code: `html, a, p, body, input, textarea, select { font-family: 'Griffy', cursive; }`. Below this is a "Change Highlighter" button.
- Experimental: CSS assistant (work in progress - click the x to remove):** A notification banner.
- Custom HTML <head> Content:** Contains a text area with the code: `<link href='http://fonts.googleapis.com/css?family=Griffy' rel='stylesheet' type='text/css'>`

### To affect most of the text

html > body, \*:first-child + html body
