Mod xspf player

XSPF Web Music Player is a flash-based web application that uses xspf playlist format to play mp3 songs. XSPF is the XML Shareable Playlist Format. The software is written in Actionscript 2.

See http://musicplayer.sourceforge.net/ for more information

Install

See Mods Admin for instructions on how to install a Mod.

Usage

Once installed, you will see some new lines under the Wiki "edit > wiki help > Show Plugins Help":

 $\{XSPF(song=url_to_mp3, playlist=url_to_xspf_playlist, player=full|slim|button, autoplay=true|false, title=text)\} \\ \{XSPF\} \\ \{XS$

Info from sourceforce on the player.

from: http://musicplayer.sourceforge.net/#download

have no idea if the wikiplugin is supporting these.

parameters:

playlist url: the url of the xspf file to load

autoplay: boolean value that make the music start without the initial user click autoload: boolean value that make the playlist load without the initial user click

repeat_playlist : boolean value that make the repeats the playlist after the end of the last song playlist_size : number of tracks

to limit

 $player_title: the \ text \ to \ replace \ the \ players \ default's$

info button text: the text to display on the info link, see this page

radio_mode : boolean value, if true tells the player that the last track of playlist is in real a new playlist location. more info

The music player can also be used to play single mp3 files instead of playlists, the parameters are:

song_url: the url of the single mp3 you want to play song title: the text to replace the players default's

If you want to use the button player, there is a test page to custom the button and generate the html code.

Example

If this Mod is related to a plugin, the following code,

 $\{XSPF(song=url_to_mp3, playlist=url_to_xspf_playlist, player=full|slim|button, autoplay=true|false, title=text)\} \\ \{XSPF\} \}$

Would produce:

(screenshot needed)
