

## Module Logo — the site logo module

This [module](#) displays the site logo, site title and site subtitle, or any combination of these. The information for the logo module can be managed on the Admin Modules page (`tiki-admin_modules.php`) or the Look & Feel admin page (`tiki-admin.php?page-look`). To use alternative logo modules, containing more or less content depending on screen size, configure the modules on the Admin Modules page rather than entering information on the Look & Feel admin page.

## Parameters

Site logo, title and subtitle.

[Go to the source code](#)

*Preferences required:* `feature_sitelogo`

Parameters	Accepted Values	Description	Default	Since
