

Database replication

Replication was added in [Tiki5](#), thanks to [SUMO](#).

This permits to send all write queries to master MySQL server, while the read requests can do to MySQL slave servers.

To use:

```
add to db/local.php
```

```
$shadow_host = 'localhost'; $shadow_user = 'root'; $shadow_pass = 'foobar'; $shadow_dbs = 'tiki4_slave';
```
