

# Plugin IFRAME

Use this [wiki plugin](#) to include the body of another web page in a wiki page, in an HTML IFRAME tag, client-side.

## Parameters

Include the body of another web page in a scrollable frame within a page

*Introduced in Tiki 3.*

[Go to the source code](#)

*Preferences required:* `wikiplugin_iframe`

| Parameters                | Accepted Values | Description             | Default | Since |
|---------------------------|-----------------|-------------------------|---------|-------|
| (body of plugin)          |                 | URL                     |         |       |
| <code>class</code>        | text            | Class for the iframe.   |         | 26.1  |
| <code>id</code>           | text            | HTML id for the iframe. |         | 26.1  |
| <code>src</code>          | url             | URL                     |         | 3.0   |
| <code>height</code>       | text            | Pixels or %             |         | 3.0   |
| <code>marginheight</code> | digits          | Margin height in pixels |         | 3.0   |
| <code>marginwidth</code>  | digits          | Margin width in pixels  |         | 3.0   |
| <code>name</code>         | text            | Name                    |         | 3.0   |
| <code>title</code>        | text            | Frame title             |         | 3.2   |
| <code>width</code>        | text            | Width in pixels or %    |         | 3.0   |

|                          |   |   |       |      |
|--------------------------|---|---|-------|------|
| <code>align</code>       | (blank)<br>top<br>middle<br>bottom<br>left<br>right | Align the iframe on the page  |       | 3.0  |
| <code>frameborder</code> | (blank)<br>1<br>0                                   | Choose whether to show a border around the iframe   |       | 3.0  |
| <code>responsive</code>  | (blank)<br>16by9<br>4by3<br>no                      | Make the display responsive so that browsers determine dimensions based on the width of their containing block by creating an intrinsic ratio that will properly scale on any device. | 16by9 | 16.0 |
| <code>scrolling</code>   | (blank)<br>yes<br>no<br>auto                        | Choose whether to add a scroll bar  |       | 3.0  |

## Example

*This code,*

---

```
{IFRAME(height="500" width="600" scrolling="auto")}tiki-  
print.php?page=Documentation{IFRAME}
```

*Would produce on this site:*
