

Plugin LS Dir

Use this [wiki plugin](#) to list files in a directory. LS comes from the shell command `ls` for listing file information. See also [PluginLocalFiles](#).

Parameters

List files in a directory

*Introduced in Tiki 1. Required parameters are in **bold**.*

[Go to the source code](#)

Preferences required: `wikiplugin_lsdir`

Parameters	Accepted Values	Description	Default	Since
<code>dir</code>		Full path to the server-local directory. Default is the document root.	1	
<code>filter</code>		Only list files with file names that contain this filter. Example: <code>.jpg</code>	1	
<code>limit</code>	<code>digits</code>	Maximum amount of files to display. Default is no limit.	0	1
<code>urlprefix</code>	<code>url</code>	Make the file name a link to the file by adding the URL path preceding the file name. Example: <code>http://yoursite.com/tiki/</code>		1
<code>sort</code>	(blank) <code>name</code> <code>size</code> <code>atime</code> <code>ctime</code> <code>mtime</code>	Set the sort order of the file list	<code>name</code>	1

Example

```
{lsdir dir="/lib/" urlprefix="http://localhost" sort="name" filter=".php" limit="5"}
```
