

# Plugin Module

Use this [wiki plugin](#) to display [Modules](#) in a page, column or other module zone.

## Parameters

Display a module

*Introduced in Tiki 1. Required parameters are in **bold**.*

[Go to the source code](#)

Preferences required: `wikipugin_module`

| Parameters               | Accepted Values                             | Description  | Default | Since |
|--------------------------|---|--|---------|-------|
| <code>module</code>      | . (cont.)<br><br>(cont'd)<br><br>(cont'd)   | Module name as known in Tiki   | 1       |       |
| <code>title</code>       | text  | Title to display at the top of the box, assuming No Title is not set to Yes ( <code>y</code> ).  | 1       |       |
| <code>contributor</code> | alpha                                       | Module only available based on the relationship of the user with the wiki page. Either only contributors (%0y%1) or only non-contributors (%0n%1) will see the module.                             | 9.0     |       |
| <code>creator</code>     | alpha                                       | Module only available based on the relationship of the user with the wiki page. Either only creators ( <code>y</code> ) or only non-creators ( <code>n</code> ) will see the module.               | 9.0     |       |
| <code>device</code>      | <code>separator: ;</code>                   | On which device the module must be displayed, by default it is displayed on all devices.   | 24      |       |
| <code>max</code>         | digits                                      | Number of rows (default: <code>10</code> )   | 10      | 1     |
| <code>notitle</code>     | (blank)<br><code>y</code><br><code>n</code> | Select Yes ( <code>y</code> ) to hide the title (default is to show the title)   |         | 3.0   |
| <code>bgcolor</code>     | text  | Override the background color for the title (if the title is shown). The value can be a color name (ex: <code>bgcolor="blue"</code> ) or a hexadecimal value (ex: <code>bgcolor="#FFEBBC"</code> ) |         | 9.0   |

|                           |                                     |   |     |
|---------------------------|-------------------------------------|---|-----|
| <code>decoration</code>   | (blank)<br>1<br>0                   | Show module title (heading) background, etc. (default is to show them)  | 1   |
| <code>category</code>     | alnum<br><i>separator:</i> ;        | Module displayed depending on category. Multiple category ids or names can be separated by semi-colons.   | 9.0 |
| <code>class</code>        |                                     | Custom CSS class.   | 9.0 |
| <code>topclass</code>     |                                     | Custom CSS class of div around the module.  | 9.0 |
| <code>flip</code>         | (blank)<br>1<br>0                   | Add ability to show/hide the content of the module (default is the site admin setting for modules)  | 1   |
| <code>float</code>        | (blank)<br>nofloat<br>left<br>right | Align the module to the left or right on the page allowing other elements to align against it   | 1   |
| <code>lang</code>         | lang<br><i>separator:</i> ;         | Module only applicable for the specified languages. Languages are defined as two character language codes. Multiple values can be separated by semi-colons.   | 9.0 |
| <code>module_style</code> |                                     | Inline CSS for the containing div element, for example, <code>max-width:80%</code>  | 9.0 |
| <code>nobox</code>        | (blank)<br>y<br>n                   | y n Show only the content with no title or borders, etc. around the content.  | 9.0 |
| <code>nocategory</code>   | alnum<br><i>separator:</i> ;        | Module hidden depending on category. Multiple category ids or names can be separated by semi-colons. This takes precedence over the category parameter above. | 9.0 |
| <code>nopage</code>       | pagename<br><i>separator:</i> ;     | Module not applicable on the specified page names. Multiple values can be separated by semi-colons.   | 9.0 |
| <code>page</code>         | pagename<br><i>separator:</i> ;     | Module only applicable on the specified page names. Multiple values can be separated by semi-colons.  | 9.0 |
| <code>np</code>           | (blank)<br>0<br>1                   | Parse wiki syntax. Default: No  | 1   |

|                          |   |   |     |
|--------------------------|---|---|-----|
| <code>perspective</code> | <code>digits<br/>separator: ;</code>    | Only display the module if in one of the listed perspective IDs. Semi-colon separated.  | 9.0 |
| <code>section</code>     | <code>text<br/>separator: ;</code>      | Module only applicable for the specified sections. Multiple values can be separated by semi-colons.   | 9.0 |
| <code>style</code>       |   | CSS styling for the module data itself.   | 9.0 |
| <code>theme</code>       | <code>themename<br/>separator: ;</code> | Module enabled or disabled depending on the theme file name (e.g. <code>thenews.css</code> ). Specified themes can be either included or excluded. Theme names prefixed by <code>!</code> are in the exclusion list. Multiple values can be separated by semi-colons. | 9.0 |

## Examples

### Basic syntax

*This code:*

```
{module module="wiki_last_comments"}
```

*Would produce on this site:*

### Last wiki comments

1. [Inline comments](#): Here is a comment about targeted comments
2. [User Preferences](#): feature\_userPreferences must be enabled
3. [Mail notifications](#): Setting' ÅfÆ'Ã,ÂçÃfÃ¢Ã¢šÅ¬ ÅfÃ¢Ã¢šÅ¬Ã¢€žÃ¢ Mail Notifications?
4. [Move Tiki to a new server](#): Slightly different
5. [Roles](#): How to activate Roles?
6. [Pretty Tracker](#): This is exactly what I needed
7. [Web Monetization](#): Most popular
8. [PluginSlideshowSlide](#): Any wiki syntax
9. [PluginSlideshowSlide](#): body of plugin
10. [Web Monetization](#): Missing info

### Displaying a module in a Template (.tpl)

You can place a module anywhere (header, footer) using the following syntax in a `.tpl` file:

```
{module module="wiki_last_comments"}
```

Older version of Tiki can revert to embedding wiki syntax:

```
{wiki}{literal}{module module="wiki_last_comments"}{/literal}{/wiki}
```
