

# PluginNow

New in Tiki9

A simple [wiki plugin](#) to show the current date and time. For examples of date and time format syntax, please see: [Date and Time Features](#)

## Parameters

Show the current date and time

*Introduced in Tiki 9.*

[Go to the source code](#)

Preferences required: `wikiplugin_now`

| Parameter                 | Accepted Values                               | Description  | Default                               | Since |
|---------------------------|---|--|---------------------------------------|-------|
| <code>when</code>         | text  | Date time as specified in text using strtotime, i.e. "next month" - documentation here:<br><a href="https://doc.tiki.org/Date-and-Time-Features">https://doc.tiki.org/Date-and-Time-Features</a> |                                       | 18.2  |
| <code>format</code>       | text  | Time format using the PHP format described here:<br><a href="https://doc.tiki.org/Date-and-Time-Features">https://doc.tiki.org/Date-and-Time-Features</a>  | Based site long date and time setting | 9.0   |
| <code>allowinvalid</code> | (blank)<br>n<br>y                             | Allow return values that are not a valid date, such as the day of the month  | n                                     | 18.3  |
| <code>timezone</code>     | . (cont.)<br>(cont'd)<br>(cont'd)<br>(cont'd) | Select a Time zone. If left empty, Tiki will guess the most appropriate one.   |                                       | 27.1  |
