

## Using Wiki Pages

To fully understand the power and flexibility of Tiki's wiki pages, be sure to review the [The Wiki](#) section. Depending on the features and options enabled, you may be able to:

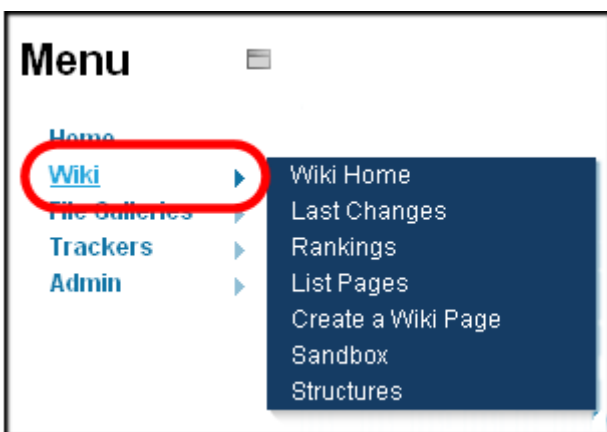

- Create new pages
- Edit existing pages
- Read pages
- Add Comments to pages
- Find Similar pages
- See what is hot and what is not
- Much, much more

## About Wiki Syntax

For detailed information on using Tiki's wiki syntax, see the following pages:

## Displaying the Wiki menu

Most wiki features can be accessed from the main menu:

Sample Wiki menu.

Depending on your site configuration, different options may be available. The primary Wiki menu options are:

Option	Description
Wiki Home	Displays which wiki page is viewed as the Wiki <i>Home</i> page. You can <a href="#">configure any wiki page</a> to be the wiki (or site) <i>home</i> page
Last Changes	Displays the last (recently) changed/edited pages. See <a href="#">Displaying Last Changes</a> .
Dump	Create (and download) an archive of the content of the wiki pages.
Rankings	Displays the top (popular) pages, based on activity. See <b>Wiki Rankings</b> below
List Pages	Displays <i>all</i> wiki pages. See <a href="#">Listing Pages</a> .
Orphan Pages	Displays wiki pages that are <i>orphans</i> (that is, have no incoming wiki links). See <a href="#">Displaying Orphan Pages</a> .
Sandbox	Displays the wiki Sandbox for practicing your wiki skills. See <a href="#">Using the Sandbox</a> .
Print	Displays a printer-pretty version of a page (or selected pages) for printing. See <a href="#">Printing Wiki Pages</a> .
Structures	Displays the <a href="#">Structures</a> on the site.
Create a wiki page	Allows you to create a brand new wiki page.

The following image is the menu that most users will see if all options are activated.

The options are as follows:

- **Wiki** the Wiki Home page is viewed. See **A Wiki Page** below
- **Wiki Home** the Wiki Home page is viewed. See **A Wiki Page** below
- **Last Changes** this allows the user to see which pages have changed. See **Last Changes** below
- **Dump** this allows the user to create a compressed file from the page
- **Rankings** this will show which pages are hot or how much activity they have had. See **Wiki Rankings** below
- **List Pages** this provides a complete listing of all pages in the site. See **List Pages** below
- **Orphan Pages** pages do get orphaned with time - that is - the links to them are removed. This option provides a way to find them. See **Backlinks & Orphan Pages** below
- **Sandbox** this is a safe place to experiment with Wiki Syntax or HTML. See **The Sandbox** below
- **Print** this allows multiple pages to be printed. See **Wiki Printing** below
- **Structures** (not shown in the image) are visible to anyone with Admin privileges. Structures are a way of applying an order to Wiki pages, like building a directory tree.

## Creating a Wiki Page

If configured, Wiki pages can be created using Smashed Word syntax. This can be defined as a number of capitalized words joined together without spaces like **MaryHadALittleLamb**. Alternately, a user can specifically tell the system to create a page like this **((This is a New Page))**. In either case, when the page is saved the Wiki will add a question mark to indicate a new page. The question mark is a link to the Wiki page editor for that page. After the new page is saved, the question mark is replaced from the original page and the link will be indicated.

TIP: A Fast Way to Create a New Wiki Page

- Edit **ANY** Wiki Page
- Somewhere at the top of the page, add the name of the page you want to create in double parentheses. Example: ((My New Page))
- Hit Save
- In the altered page, select the underlined Question Mark. Example: My New Page?

You will then be editing the page you wanted to create. This method allows you to see if the page already exists. A link will be displayed if a page with that name exists (instead of the question mark) so you can change the page's name and hit Preview again.

## Displaying Last Changes

This page displays the last changed (most recently updated) wiki pages. You can select a specific timeframe (Today, Last 2 days, Last 3 days, Last 5 days, Last week, Last 2 weeks, Last month, or All) to display. You can also use the **Find** box to search for a specific page.

Use the [Wiki Page Listings](#) tab of the [Administer Wiki](#) page to enable this feature and specify what information appears on the page.

The screenshot shows the 'Last Changes' interface. At the top, there are filter buttons for 'Today', 'Last 2 days', 'Last 3 days', 'Last 5 days', 'Last week', 'Last 2 weeks', 'Last month', and 'All'. Below these is a search box with a 'Find' label and a 'Go' button. The main content is a table with the following columns: Date, Page, Action, User, Comment, and Action. The table lists several recent updates, including changes to 'Using the Wiki', 'Documentation', and 'PluginAddToCart' by users like Rick, Gregor, and Marc.

Date	Page	Action	User	Comment	Action
13:18 EDT	Using the Wiki	Updated	Rick★		v2 v b c d s
12:24 EDT	Documentation	Updated	Rick★	note and link for initial tiki user guide	v
12:24 EDT	Documentation	Updated	Rick★	note and link for initial tiki user guide	v153 v b c d s
01:08 EDT	PluginAddToCart	Updated	Gregor (gta74)★		v19 v b c d s
01:08 EDT	PluginAddToCart	Updated	Gregor (gta74)★		v
Wed 29 June, 2011 15:51 EDT	XML Import-Export	Updated	Marc Laporte★		v
Tue 28 June, 2011 17:48 EDT	Location Tracker Field	Created	Marc Laporte★		v1 v b c d s
Tue 28 June, 2011 17:43 EDT	Draw	Updated	Marc Laporte★		v14 v b c d s

Page: 1/3 | 1 2 3

Displaying last (recent) wiki changes

For each page's change, Tiki displays:

- Time and date of the change

- Page name
- User (and IP address) who made the change
- Description (comment) of the edit
- An **Action** column with the following links:

Link	Description
	Display a detailed Page History for the page. See <a href="#">History</a> .
<b>v</b>	Display the indicated page version.
<b>b</b>	Rollback (that is, revert) a page to the specified version. Tiki will prompt you for confirmation before rolling the page back. An alternative to rolling back pages is to remove all the versions of the page that you do not want, until the desired version becomes current.
<b>c</b>	Display a side-by-side comparison (diff) of selected version with the current version.
<b>d</b>	Display a side-by-side comparison (diff) of selected version with any other version of the page. Some people prefer the Difference tool while others prefer the Comparison tool, you can use whatever you want or both.
<b>s</b>	Display the wiki source of the selected version. This is nearly identical to what is shown in the Wiki Page Editor when you edit a page.

## Wiki Rankings

# Listing Pages

This page lists all wiki pages. You can filter the list by Language and Category. You can also use the **Find** box to search for a specific page and even specify if the page name must exactly match the query. Use the **Number of displayed rows** field to specify the number of wiki pages to display on each page.

Use the [Wiki Page Listings](#) tab of the [Administer Wiki](#) page to enable this feature and specify what information appears on the page.

Listing wiki pages

Pages can be listed through the option "**Wiki > List pages**" in the main menu, which will lead to the relative url "**tiki-listpages.php**". From there, you will be able to search for page names containing certain words and indicating whether you want to find exact matches or not (Tiki 1.9)

In Tiki 2.0, this feature has been enhanced and it allows to search pages also by category, set the number of rows that you want in the resulting list.

For each wiki page, Tiki displays:

- Name of the page
- Number or hits (reads)
- Date and time the page was last modified
- Name (and IP address) of the user who last modified the page
- Number of versions of the page [history](#)
- Number of wiki links and backlinks to the page
- Language of the page
- Category of the page
- An **Action** column with the following links:

Link	Description
	Edit the page

Link	Description
	Copy (duplicate) the page
	Display a detailed Page History for the page. See <a href="#">History</a> .
	Delete the page.

Starting in Tiki 2.0, you can modify multiple wiki pages at once by choosing specific pages and selecting an option from the **Perform action with checked**.

## Displaying Orphan Pages

This page lists all wiki pages that are *orphans* (that is, they have no incoming or [backlinks](#)). You can filter the list by Language and Category. You can also use the **Find** box to search for a specific page and even specify if the page name must exactly match the query. Use the **Number of displayed rows** field to specify the number of wiki pages to display on each page.

Use the [Wiki Page Listings](#) tab of the [Administer Wiki](#) page to enable this feature and specify what information appears on the page.

Perform action with checked:

Page: 1/6

1 2 3 4 5 6

Sample Orphan Pages.

For each wiki page, Tiki displays:

- Name of the page
- Number or hits (reads)
- Date and time the page was last modified
- Name (and IP address) of the user who last modified the page
- Number of versions of the page [history](#)
- Number of wiki links and backlinks to the page
- Language of the page
- Category of the page
- An **Action** column with the following links:

Link	Description
	Edit the page
	Copy (duplicate) the page
	Display a detailed Page History for the page. See <a href="#">History</a> .
	Delete the page.

Starting in Tiki 2.0, you can modify multiple wiki pages at once by choosing specific pages and selecting an option from the **Perform action with checked**.

## Working with Wiki pages

You can perform many tasks from a wiki page. Tiki displays the following buttons a typical wiki page:

Sample wiki page with icons, droplists, and buttons (Tiki 7).

Depending on your site configuration, different buttons may be available. The primary Wiki menu options are: **Icons**

The icons at the top of the page can be used to:

-  Edit the page in the **Wiki Page Editor**.
-  Display a printer-friendly version of the page (with no menus, sidebars, or banners — only the central content area).
-  Create an Adobe PDF file from the current page.
-  Creates a copy of the page and saves it to your **Notepad** in the MyTiki section. See **Notepad**
-  Allows the page to be monitored. When a change is made to the page, an email is automatically sent to every user who is monitoring the page. See **Page Notification** below
-  Toggles the edit icons

### Droplists

- structure

-  Provides a listing of every page that references this page. See **Backlinks & Orphan Pages** below
- language

## Buttons

The buttons across the top have the following meaning:

- **Edit this page** this opens the Wiki Page editor for this page. See the [Wiki Page Editor](#) page
- **Source**
- **Remove** this allows a Wiki page to be deleted. **NOTE:** A deleted page can be recovered by admin.
- **Rename** this allows the page to be renamed. See **Page Renaming** below
- **Lock/Unlock** a page can be locked to prevent it from being edited. If this is done, only the Author (if enabled) or Admin will be able to unlock it.
- **Permissions** Group Permissions can be assigned to a page. See **Page Permissions** below
- **History** this provides a detailed History of the page. See **Page History** below
- **Similar** this is a search facility for finding similar pages. See **Similar Pages** below
- **Slideshow**
- **Undo Button** this will undo the last edit. See **Undo Edit** below
- **Export** this allows the page to be exported to a text file on your system. See **Page Export** below
- **Comment** users can add comments to a page. See **Page Comment** below
- **Attach File**

The following image is for the Wiki Home Page before any content was added to it.

Depending on your site configuration, different buttons may be available. The buttons across the top have the following meaning:

- **Edit Button** this opens the Wiki Page editor for this page. See the [Wiki Page Editor](#) page
- **Remove Button** this allows a Wiki page to be deleted. **NOTE:** A deleted page can be recovered by admin.
- **Rename Button** this allows the page to be renamed. See **Page Renaming** below
- **Lock/Unlock Button** a page can be locked to prevent it from being edited. If this is done, only the Author (if enabled) or Admin will be able to unlock it.
- **Perms Button** Group Permissions can be assigned to a page. See **Page Permissions** below
- **History Button** this provides a detailed History of the page. See **Page History** below
- **Similar Button** this is a search facility for finding similar pages. See **Similar Pages** below
- **Undo Button** this will undo the last edit. See **Undo Edit** below
- **Export Button** this allows the page to be exported to a text file on your system. See **Page Export** below
- **Comment Button** users can add comments to a page. See **Page Comment** below

The Icons at the top have the following meaning:

-  Opens the editor for this page. See the [Wiki Page Editor](#) page
-  Provides a listing of every page that references this page. See **Backlinks & Orphan Pages** below
-  This will display a printer-friendly version of the page by removing menus, sidebars, banners and anything else except the central column.
-  Will create an Adobe PDF file from the current page.
-  Creates a copy of the page and saves it to your **Notepad** in the MyTiki section. See [Notepad](#)
-  Allows the page to be monitored. When a change is made to the page, an email is automatically sent to every user who is monitoring the page. See **Page Notification** below

## Page History

Please see: [History](#)

## Similar Pages

Similar Pages show a listing of pages with names similar to the current page. Pages are created and named using words combined together, so Similar Pages will show pages where one or more of these words are the same as the words in the current pages. As an example MyPage, NFLResultsPage OpinionsPage are similar because they share the word Page

## Undo Edit

The Undo button can be used to Undo the last edition of a page. If the Undo feature is enabled then a user that can edit pages will be able to Undo what they did even if they can not Rollback pages or Remove page versions.

Pressing the undo button removes the current version of the page making the last version in the history the current page; if no version is in the history then the page is reverted to an empty page.

**Note:** A users will only be able to Undo their editing and not the editing that any other user has done unless the user has permission to remove page versions.

## Page Export

The Export button can be used to export the current version of the page. When clicked your browser will prompt you to save the file. The exported page can then be edited and later be imported back into the Wiki. You can also export all the versions of a page. This link is inside the Page Editor.

## Page Comments

Wiki pages can allow comments to be posted to them. The comments can be threaded, in a similar way as they can be in [forums](#). If the feature is enabled, and the user belongs to a group with the needed permission, a button "**add comment**" will be shown below the page.

## Page Renaming

The Rename button can be used to [rename](#) a Wiki page; all wiki links referencing the page will be updated as well. An error message will be generated if the new page name is already in use.

**Note:** A user must have a permission to rename pages.

## Backlinks & Orphan Pages

Every page has a list of Backlinks. Backlinks are links from any page to the current page (the page you are reading), you can use the Backlinks option to see which pages are linking to a particular page and find Orphan pages (pages with no Backlinks). Orphan pages are unlikely to get visited very often. On many occasions, Orphan pages are old pages that were removed from the Wiki and should have been deleted.

- In order to display orphan pages the feature must be enabled through Admin > Wiki > Page Listings
- See [Backlinks](#)

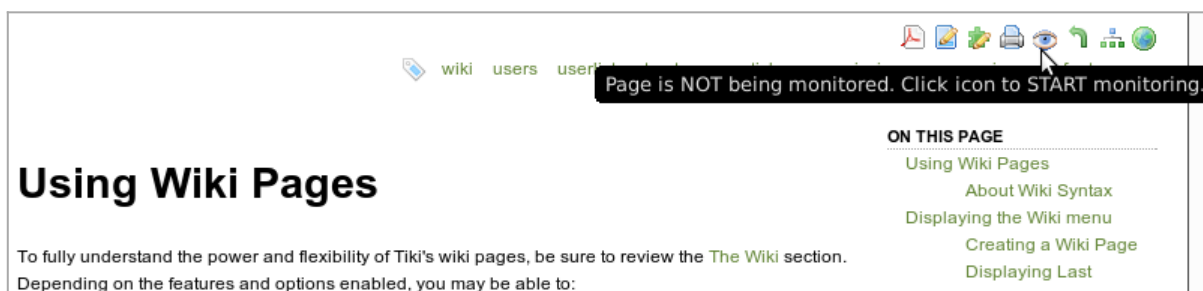

## The Sandbox

Like a real Sandbox, in Tiki, the Sandbox is a place to play. You can test out ideas here, experiment with Wiki Syntax or HTML safely. The contents of the Sandbox are never saved, so when you have something perfected - copy the contents and paste them into a Wiki page.

## Page Monitoring

Page monitoring allows a registered user to receive an email when ever there is an edit or new comment applied to a a wiki page. Logged in users can click the monitor button at the top of a wiki page to turn monitoring on or off per a page.

For instance, for this page, a registered user will have the option to monitor it (add a "User Watch" to it), as indicated in the following image:

Later on, the user can click on the equivalent icon (eye with the red cross) again to stop monitoring the page:

Click to expand

Since wiki pages can belong Wiki [Structures](#), and Wiki structures can be monitored, you can get an email each time a page has been added below the hierarchical level of the page you are interested in (regarding a common [structure](#) of wiki pages).

Keep in mind also that if you are interested in pages of the same type of content, you can use add a Watch on a content [Category](#), so that any other pages (or other tiki objects) assigned to or unassigned from that category, will send you an email reporting you that change in the objects of that category.

For an overview on the possibilities of Monitoring wiki pages (user watches, group watches, structures, categories, etc), see [Watches](#).

## Page Permissions

NOTE: in Tiki 1.9 permissions can be applied to an entire wiki structure.

Users in a group with permissions `tiki_p_admin_wiki` can set permissions per a page. Click **perms** and then select the permissions you wish to apply for what user groups to that page. If no individual permissions are applied to a page, global permissions apply.

If `tiki_p_creator_admin` is set too and if the user is the creator, he can also redefine the perms.

As soon as one permission is applied, all global permissions are overridden and thus you will probably have to apply a few individual permissions so one or more user groups can view and edit the page.
