~126~126~126~~126~110~126~~126~112~126~~126~126~126~ produces:

~126~~110~~112~~126~

~126~126~126~~126~47~126~~126~110~126~~126~112~126~~126~126~126~

produces: ~126~~47~~110~~112~~126~ !!!Indent Indent is formed by the combination of the ; and : characters. ; must appear at the beginning of a line and : must appear between

introduction text and the indented text. The introduction text portion is useful for forming definition type indentation like Example 1 below. However the introduction text can be eliminated

by simply including :: together followed by the text as shown in Example 2. ^Example 1:

~np~;Intr

Text

Example 2:

Example 2:

2nd example of indented text^

Using Square Brackets

If you wish to include square brackets in your text (i.e. as regular text and not a link) simply add an additional open bracket to start. E.g.

[[this would not be a link]]

Would render like this...

[this would not be a link]

Non-breaking space

Use ~hs~~ to add the HTML " " for a non-breaking space.

Entering code

You enter code blocks by enclosing the block between `CODE()` and `CODE` tags (you need to put curly braces around the tags). Note this is a smarty construct, not a Wiki syntax.

Useful Links

- The Color Picker II is located at <http://www.pagetutor.com/pagetutor/makapage/picker/>
- [WebDevlopper](#) extension for Mozilla Firefox
- The wiki syntax is not standardised accross applications. There is an initiative to publish the Wiki-Syntax as an RFC from the [IETF](#). See [RFCWiki](#)
