Gary, unluckily we've had a confusion due to that issue of renaming pages to singular that was performed weeks ago. **Games Admin** (and the other **Games** pages) were renamed (I guess, or just created again as blank pages???) to singular form, and those were the ones I filled in yesterday already and copied over the -odt-.pdf file  (they were the ones I saw at [Documentation](#) structure):

- Games
- [Game User](#)
- [Game Admin](#)
- [Game Details](#)

Could you merge your content (if any) to the pre-existing pages in the structure?

(we should all look for in the [Documentation](#) structure first, before this kind of confusion happens again... due to the "singular - plural" name issue; and we should always leave a "redirect" (with REDIRECT plugin) on the other page to the one which hold the documentation, whichever it is singular or plural...

Old pages: Games User, Games Admin, Games Details.

In my opinion, these pages should have plural-form names, because the feature's name is "Games", not "Game". I see there is still strangeness on the Features page. "Freetags" and "Charts" seem correct to me. I thought there was agreement that natural language was the way to go on this. Sorry for making trouble, but that's the way I see it.

I agree, Gary, as you know, and we talked on irc.

Possible solutions I see:

1. pages are re-named to natural language. ([Category](#) -> [Categories](#))
2. no-natural language pages are created (if needed) with a redirect to natural language pages.
 - in the mean time, missing important natural language pages can be created (if needed) with a redirect to the existing page? ([Categories](#) -> [Category](#)) ?

But for my own likes, I would prefer that we documenters invest time in filling important gaps in the documentation ([stub](#) pages for modules, plugins, mods, ...), previous to investing too much time into this internal renaming feature. (my personal opinion, of course)
